COMMUNITY DEVELOPMENT DEPARTMENT • 345 N EL DORADO STREET • STOCKTON, CA 95202 • (209) 937-8561
www.stocktonca.gov/buildinginspection

California Building Code - Section 110.5: Inspection requests. *…It shall be the duty of the permit holder to provide access to and means for inspections of such work that are required by this code.*

A ladder must be on the jobsite for the Building Inspector's use. The ladder must be setup to meet the following minimum standards.

- The ladder shall meet OSHA Standards and by rated a minimum 250lbs.
- Find a level, hard, slip resistant spot on the ground free of debris to set the ladder feet on.
- The ladder shall extend no less than 36 inches above the edge of the roof at the point providing access **and secured (tied off).**
- Place the feet of the ladder at a distance of ¼ the height of the ladder away from the building. In other words, if the ladder is 8 feet tall, place the bottom of the ladder 2 feet away from the building. If the ladder is 12 feet tall, place the bottom 3 feet from the building.
- If you have a gutter, slip a 2 x 4 into it to keep it from being crushed by the ladder.

The inspector will need to access the roof for the following inspections:

- After removal of built-up roofing for the deck inspection.
- After new plywood or OSB sheathing is installed for the nailing inspection.
- After the project is complete for the final inspection.
- Any roof mounted equipment associated with the permit (i.e. HVAC or Photovoltaic).

Note: Inspectors will not walk on tile roof coverings or pitches exceeding 5/12. Ladders are still required for access to the roof edge for these inspections.

If a ladder is not provided or if the ladder does not meet the minimum requirements listed above, the inspection will be canceled. If a second inspection request is canceled for lack of access, a reinspection fee will be issued.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/29/2024 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where

environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/23/2023 has revealed that there are 25 ENVIROSTOR sites within approximately 1 mile of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 41 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Site History:	The case was closed in October 2017 as site conditions meet the State Water Board s Low-threat Underground Storage Tank Case Closure Policy (Policy). The Site operated as gas station from as early as 1922. Three USTs were removed in January 1992. The site investigation revealed that the most impacted area was the southeast corner of the property where USTs were located until they were removed in 1967. Several phases of investigation have resulted in many soil borings, monitoring wells, vapor extraction wells, soil vapor survey wells and ozone infusion wells being installed. Chevron excavated petroleum-impacted soil from certain areas of the Site. Chevron performed ozone injection from December 2000 to April 2005 to address groundwater impacts. Chevron conducted a soil vapor survey in 2009 and concluded site conditions do not pose an unacceptable risk to human health via the indoor air pathway. Chevron evaluated residual soil concentrations and concluded screening levels established in the Policy for the direct contact and outdoor air exposure pathway were not exceeded. Based on groundwater monitoring conducted through 2012, the residual groundwater plume is defined, decreasing in concentration, expected to meet background conditions in a reasonable amount of time, and does not threaten surface water bodies or water supply wells. Chevron destroyed all remediation and monitoring wells, and removed all residual waste materials in 2017.

RWQCB Region: CENTRAL VALLEY RWQCB (REGION 5S)
Site History: Site is located on the southwest corner of California Street and East Miner Avenue in Stockton, in the parking lot for the building at 242 Sutter Street. The location is the site of a former Chevron facility; at least two generations of tanks are documented at the site, but there are no records of the tank removals. Site investigation activites were initiated by the current property owner, Sutter Office Center, in May 2000 with the installation of geoprobe soil borings. Soil and grab groundwater samples were collected for analysis and confirmed there are petroleum hydrocarbons in the subsurface soil and groundwater. Groundwater monitoring wells were first installed in 2001; CPT borings in 2003; additional groundwater monitoring wells in 2005, 2007 and 2009; additional borings in 2007. Chevron was named a responsible party and took over the site investigation in 2006.

RWQCB Region: CENTRAL VALLEY RWQCB (REGION 5S)
Site History: December 3, 2004- One underground storage tank (UST), located in the city of Stockton right-of-way under the west sidewalk, was removed. Soil samples were collected from beneath the tank. Analytical results of the soil reported petroleum hydrocarbon impact. January 2005- The tank pit area was excavated to try and dig out the contamination; they did not, deeper soil samples more highly impacted than the shallow ones. February 19, 2008- Soil boring SB-1 was advanced within the former tank pit to 50 ft. below surface grade (bsg). Analytical results yielded 590,000 micrograms per liter (g/L) of total petroleum hydrocarbons as diesel (TPH-d) in groundwater sampled at 34 ft. bsg. TPH-d was also detected in 4 soil samples collected within SB-1 between 20-48 ft. bsg; the highest concentration being 4,500 milligrams per kilogram (mg/kg) at 29.5 ft. bsg. (Report dated 3/24/2008) November 12 and 13, 2008- CPT borings were advanced up to 100 ft. bsg. CPT-1 (4 separate borings) yielded as high as 3,600 g/L TPH-d in groundwater sampled at 61 ft. bsg and yielded as high as 3,500 mg/kg TPH-d in soil sampled at 60 ft. bsg. CPT-2 (3 separate borings) yielded 5,800 g/L TPG-d in the sole groundwater sample taken from 41 ft. bsg and yielded as high as 4,600 mg/kg TPH-d in soil sampled at 35 ft. bsg. CPT-3 (one boring) has no available chemical analytical data. (Report dated 1/5/2009)

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	Three underground storage tanks were removed form the site in October 1987; soil samples collected from beneath the tanks were reported to contain petroleum hydrocarbon contamination. An overexcavation of the tank pit area was conducted in January 1988. A site investigation was initiated in June 1997 with the installation of three groundwater monitoring wells and seven soil borings. Between March 1998 and December 2001 seven additional groundwater monitoring wells, eight soil borings two soil vapor extraction wells and two air sparging wells were installed. A soil vapor extraction/air sparging feasibility test was conducted in March 2000. Remediation by vapor extraction began in December 2002; the air sparging system was started in February 2003. A work plan to conduct a feasibility study for ozone infustion was approved for implementation in March 2009.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Site History:	<<<<<<<<<<START Public Notes>>>>>>>>> Underground storage tanks were removed from the site in 1990. A site investigation began in 1993 with the installation of seven groundwater monitoring wells and six soil borings. Additional hydropunch and cone penetrometor test borings have been installed to determine the vertical and lateral extent of the petroleum release from the tanks. Routine groundwater montioring continues. 11-22-2010: EHD approves Dual Phase Extraction Pilot test-3 wells to be installed. 3-25-2011: EHD directes RP to enact DPE pilot test. April 7, 2011: DPE pilot test conducted onsite. May 13, 2011: DPE Pilot test report and RAP work plan (DPE) received and approved by the EHD. No additional investigation required at this time. Once the DPE system is installed and in operation, soil vapor and ground water concentration trends can be evaluated over time.

Site History:	On 02 July 2004, one 3,000-gallon heating oil UST was discovered under the sidewalk on the north side of East Main Street. During tank removal free product was encountered in the soil underlying the UST. A total of 5 cubic yards of impacted soil was excavated from the UST pit and disposed of offsite. Additional remediation was not warranted. The Site's responsible party investigated soil, soil gas, and groundwater at the Site from 2009 to 2021. Petroleum hydrocarbons is soil greater than Low-Threat Closure Policy residential concentration criteria have not been detected since 2017. Petroleum hydrocarbons have not been detected in soil gas samples above Low-Threat Closure Policy residential soil gas concentration criteria. Petroleum hydrocarbons were not detected in four quarters of groundwater sampling between April 2021 and February 2022. Central Valley Water Board staff have evaluated Site conditions against the Low-Threat Closure Policy and concluded the Site meets the criteria for closure and recommended issuing a no further action letter for closure of this case. The Central Valley Water Board closed the case in July 2023.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	Historical dry cleaner operations dating from the 1950's are the likely source of PCE and TCE. In 1990 two USTs that contained fuel and 1 UST containing waste oil were removed. In 2002, soil was removed from the waste oil tank location. In 2003 Unifirst built a new laundry facility that does not use dry cleaning solvents. In April 2005, monitoring wells were installed for a fuel release investigation. In 2007 soil vapor samples were obtained in parking lot and in 2008, soil vapor samples obtained within the Unifirst building and monitoring wells installed on-site and off-site. In 2009, a sub-slab depresssurization system was installed beneath the Unifirst facility.

Site History:	This site is at the current location of the County of San Joaquin Human Services Administration. April 1988- Nine underground storage tanks were removed from the site. Soil samples were collected from beneath the tanks; laboratory analysis reported petroleum hydrocarbon impact. December 1988- A site investigation began with the installation of groundwater monitoring wells. Petroleum hydrocarbon impact to the groundwater was reported. August 1991-August 1996- Additional groundwater monitoring wells were installed to define the lateral extent of the plume. January 1998- A Corrective Action Plan for the site was submitted; recommendation was for remediation by natural attenuation. June 2006- The Corrective Action Plan was reviewed and additional data collection was recommended by the consultant. The site is not vertically defined. June 2008- Fieldwork began to install a deep boring and a deep well. The boring was completed, but during the well installation additional underground storage tanks were discovered beneath the sidewalk of Sutter Street at the corner with Washington Street. Ground penetrating radar was used to try and determine how many tanks were there; appears to be two. A tank removal plan and continuation of the site investigation is pending.

Site History:	July 1997 groundwater contamination containing MtBE was noted at a non-operating Shell Station site located down-gradient from the ARCO station. February 1999 three 12,000 gallon underground storage tanks removed, contamination was noted under the tanks. The site investigation began after this with the installation of four groundwater monitoring wells. Between June 2000 and May 2004

ARCO #4493 (Continued) **S101592834**

additional groundwater monitoring wells, both shallow and deep, were installed. The site is defined; the problem area is around the MW-4/MW-8M/MW-8D/MW-12 cluster of wells located near the former dispenser island area. The EHD has requested interim remediation of these wells to lower contaminant concentrations. Quarterly batch extractions began in third quarter 2008. The EHD sent notification to the Regional Water Quality Control Board on 6/10/10 of their intent to close the site. In preparation for closure, destruction of all groundwater monitoring wells began on 10/18/10.
