EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Central Valley Low Income Housing Corporation to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 418 North California Street, Stockton, San Joaquin County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

Findings and Opinions

Significant Data Gap(s) is defined by the current ASTM Standard E1527 as a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

AEI did not identify significant data gaps which affected our ability to identify RECs.

Recognized Environmental Condition (REC) is defined by the current ASTM Standard E1527 as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to

the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

- According to historical sources, the subject property was occupied by Manthey Brothers, a rug and carpet cleaning and awning, tent, and upholstery repair and manufacturing facility, from 1893 to 1985. Manthey Brothers appears to have conducted rug and carpet cleaning operations from 1893 through at least 1943, and awning, tent and furniture manufacturing and repair operations through at least 1985. Based on the nature of use, it is likely that various quantities of hazardous substances were used and stored on site, Rug and carpet cleaning operations during this time frame typically use chlorinated solvents, particularly PCE, during the dry cleaning process. While PCE was first used widely as a dry cleaning solvent in 1934, carbon tetrachloride was used from the 1920s to early 1930s and trichloroethylene (TCE) was used prior to PCE. Prior to the 1930s, petroleum solvents may have been used including camphene, benzene, kerosene, and gasoline. These substances and solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Specifically, chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility.

  Additionally, given the nature of site operations, it is possible that the on-site furniture, mattress and awning manufacturing and repair operations included the use and handling of PFAS including PFOA/PFOS. PFAS were commonly used to make furniture and mattresses more durable, water-resistant, and stain-resistant. Limited information on past PFAS use was identified, however, it should be noted that PFAS has been largely unregulated in the past and so documentation verifying past PFAS use is often limited or non-existent.

  Based on this information, the likely presence of hazardous substances at the subject property due to a likely release represents a REC. In particular, the presence of the rug and carpet cleaning and awning, tent, and upholstery repair and manufacturing facility on the subject property represents evidence of a REC. A VEC was also identified in connection with this REC. Refer to Section 5.2 for further discussion. Due to the nature of the REC, it is not depicted on Figure 2: Site Map and a photograph is not included in Appendix B.
- According to a review of historical sources, the adjoining site to the south at 408 North California Street was formerly a gasoline service station from at least 1950 until 1968. AEI reviewed records for the former gas station facility on file with the San Joaquin County Environmental Health Department. A 2001 Limited Soil Investigation report conducted at the southern adjoining site identified the former USTs to be located at the southern portion of the site, approximately 70 feet south of the subject property. The former gas station previously utilized one 5,000 gallon UST, two 2,000 gallon USTs, and one 1,000 gallon UST. Two soil borings were advanced at the site in the approximate locations of the former USTs and dispenser island. Two soil samples were collected and laboratory tests found BTEX, TPHg, TPHd, MTBE TBA DIPE, ETBE, and TAME were all non-detect. However, it should be noted that groundwater and soil vapor samples were not collected as part of the 2001 investigation. Based on the proximity of this site to the subject property, the inferred direction of groundwater flow, and the limited scope of the previous investigation, the potential exists that,

if a release of petroleum hydrocarbons occurred at this site, the subsurface of the subject property may have also been impacted. Therefore, the potential release from the adjoining site has the potential to impact the subject property, which is considered evidence of a REC. A VEC was also identified in connection with this REC. Refer to Section 5.2 for further discussion. Due to the nature of the REC, it is not depicted on Figure 2: Site Map and a photograph is not included in Appendix B.

Controlled Recognized Environmental Condition (CREC) is defined by the current ASTM Standard E1527 as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the current ASTM Standard E1527 as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- Due to the age of the subject property building, there is a potential that ACMs are present. The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.
- Due to the age of the subject property building, there is a potential that LBP is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time.

However, based on the potential presence of LBP and residential nature of occupancy, AEI recommends the property owner implement an LBP O&M Plan to protect the health and safety of the building occupants. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an x-ray fluorescence (XRF) survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-21, of 418 North California Street, Stockton, San Joaquin County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

As listed in the Findings section above, this assessment has revealed recognized environmental conditions, controlled recognized environmental conditions, and/or significant data gaps in connection with the subject property.

RECOMMENDATIONS

AEI recommends the following:

- Subsurface Investigation

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 418 North California Street, Stockton, San Joaquin County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with the most current ASTM E1527 Standard associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by the current ASTM Standard E1527. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under the current ASTM Standard E1527.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. The current ASTM Standard E1527 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the current ASTM Standard E1527.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- The subject property owner was not interviewed during this assessment. Based on information obtained from other sources, including the key site manager, this limiting condition is not expected to alter the overall findings of this assessment.
- The Stockton Building Department was contacted for information on the subject property in order to identify historical tenants/use, property development, and hazardous substance/petroleum product handling at 420 North California Street. Due to the time frame of this assessment, historical records were not available for review. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the findings of this assessment.
- Due to the size of the property, AEI observed a representative sample of interior spaces. AEI observed the following units: 5, 202, 205, 209, 210, 211, and 212. Due to the residential nature of occupancy, this limited inspection method is expected to be adequate for the purposes of this assessment.
- Due to the large volume of materials within portions of the building, direct visual observation of many of the floor and wall areas of the building was not possible. Features may be present that were not observed during AEI's field reconnaissance. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.

1.6 Data Failure and Data Gaps

According to the current ASTM Standard E1527, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to the current ASTM Standard E1527, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to the current ASTM Standard E1527, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to the current ASTM Standard E1527, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	As noted in Section 3.0, the earliest historical resource obtained during this assessment indicated that the subject property was developed with a carpet cleaning business. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure. However, as it is assumed that the subject property would have been previously undeveloped, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs, Sanborn fire insurance maps, city directories, historical topographic maps, agency records, interview

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of Central Valley Low Income Housing Corporation. This report is for the purpose of evaluating the subject Property in connection with securing mortgage financing and has no other purpose. This report may not be relied upon by any other person or entity without the written consent of AEI either verbally or in writing. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with Central Valley Low Income Housing Corporation and AEI's contract and Terms and Conditions dated October 15, 2024. The limitation of liability defined in the contracted terms is the aggregate limit of AEI's liability to the client and all relying parties.

Utility source/system information listed in the table above is provided by online research and site observation unless otherwise noted above.

2.3 Site and Vicinity Characteristics

The subject property is located in a commercial and residential area of Stockton, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Unmarked commercial building (434 North California Street) Javier Smog Time (514, 524 East Fremont Street)	Yes; refer to Section 5.1
East	Zapata Funeral Home (445 North American Street) Residential (417 North American Street)	None identified
South	Golden Smog Check (408 North California Street) Vacant land (517 East Lindsay Street)	Yes; refer to Section 5.1

2.4 PHYSICAL SETTING

Geologic Unit	Qmub: Upper member, fine grained Source: USGS and United States Department of the Interior
Soil Series	Yellowlark gravelly loam: gravelly loam 0 to 39 inches, very gravelly loam 39 to 47 inches, gravelly clay 47 to 54 inches, clay loam 54 to 59 inches, cemented 59 to 62 inches Source: USDA Soil Survey
Groundwater Flow Direction	Northeast to east Source: LUST case data for 602 North California Street, obtained via GeoTracker
Estimated Depth to Groundwater	27 to 33 feet bgs Source: LUST case data for 545 Miner Avenue, 550 southeast of the subject property, obtained via GeoTracker
Surface waters on the subject property or adjoining sites	None
Additional Notes	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL RECORDS REVIEW

Reasonably ascertainable standard historical sources as outlined in the current ASTM Standard E1527 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, historical topographic maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1893	Unknown use/Data failure; refer to Section 1.6.1	N/A
1893	Occupied by a carpet cleaning and upholstery facility, Manthey Brothers (420 North California Street)	Historical newspaper records

The following historical addresses were associated with the subject property: 418-430 North California Street. Due to the use of these addresses prior to a time of regulatory oversight or city directory coverage, they were not researched as part of this assessment.

According to historical sources, the subject property was occupied by Manthey Brothers, a rug and carpet cleaning and awning, tent, and upholstery repair and manufacturing facility, from 1893 to 1985. Manthey Brothers appears to have conducted rug and carpet cleaning operations from 1893 through at least 1943, and awning, tent and furniture manufacturing and repair operations through at least 1985. Based on the nature of use, it is likely that various quantities of hazardous substances were used and stored on site, Rug and carpet cleaning operations during this time frame typically use chlorinated solvents, particularly PCE, during the dry cleaning process. While PCE was first used widely as a dry cleaning solvent in 1934, carbon

tetrachloride was used from the 1920s to early 1930s and trichloroethylene (TCE) was used prior to PCE. Prior to the 1930s, petroleum solvents may have been used including camphene, benzene, kerosene, and gasoline. These substances and solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Specifically, chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility.

Additionally, given the nature of site operations, it is possible that the on-site furniture, mattress and awning manufacturing and repair operations included the use and handling of PFAS including PFOA/PFOS. PFAS were commonly used to make furniture and mattresses more durable, water-resistant, and stain-resistant. Limited information on past PFAS use was identified, however, it should be noted that PFAS has been largely unregulated in the past and so documentation verifying past PFAS use is often limited or non-existent.

Based on this information, the likely presence of hazardous substances at the subject property due to a likely release represents a REC. In particular, the presence of the rug and carpet cleaning and awning, tent, and upholstery repair and manufacturing facility on the subject property represents evidence of a REC.

According to a review of historical sources, the adjoining site to the south at 408 North California Street was formerly a gasoline service station from at least 1950 until 1968. AEI reviewed records for the former gas station facility on file with the San Joaquin County Environmental Health Department. A 2001 Limited Soil Investigation report conducted at the southern adjoining site identified the former USTs to be located at the southern portion of the site, approximately 70 feet south of the subject property. The former gas station previously utilized one 5,000 gallon UST, two 2,000 gallon USTs, and one 1,000 gallon UST. Two soil borings were advanced at the site in the approximate locations of the former USTs and dispenser island. Two soil samples were collected and laboratory tests found BTEX, TPHg, TPHd, MTBE TBA DIPE, ETBE, and TAME were all non-detect. However, it should be noted that groundwater and soil vapor samples were not collected as part of the 2001 investigation. Based on the proximity of this site to the subject property, the inferred direction of groundwater flow, and the limited scope of the previous investigation, the potential exists that, if a release of petroleum hydrocarbons occurred at this site, the subsurface of the subject property may have also been impacted. Therefore, the potential release from the adjoining site has the potential to impact the subject property, which is considered evidence of a REC.

If available, copies of historical sources are provided in Appendix D.

3.1 Aerial Photographs

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years (1937-2020, non-inclusive):

Year(s)	Subject Property Description	Adjoining Site Descriptions
1937*, 1940	Developed with the current structure	NORTH: Developed with a commercial building EAST: Developed with multiple commercial buildings SOUTH: Developed with multiple commercial buildings WEST: Roadway followed by land developed with multiple commercial buildings

Year(s)	Subject Property Description	Adjoining Site Descriptions
1957, 1963	No significant change	NORTH: No significant change EAST: No significant change SOUTH: Developed with a gasoline station and an apartment building WEST: No significant change
1975*, 1982, 1984	No significant change	NORTH: Developed with multiple commercial buildings EAST: No significant change SOUTH: No significant change WEST: No significant change
1993, 1998, 2006, 2009, 2012, 2016, 2020	No significant change	NORTH: No significant change EAST: No significant change SOUTH: Developed with an automobile repair shop and an apartment building WEST: No significant change

Subject property:

- No potential environmental concerns identified

Adjoining Site(s):

- Historical gas station - refer to Section 3.0

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

The following maps were reviewed (1895-1972, non-inclusive):

Year(s)	Subject Property Description (Listed Address)	Adjoining Site Descriptions
1895	Developed with two dwellings and multiple stables/sheds as well as a commercial building at the southeast corner occupied by a carpet clearing and upholstery facility (418-430 North California Street)	NORTH: Developed with two dwellings EAST: Developed with dwellings SOUTH: Developed with a dwelling and vacant land WEST: North California Street followed by dwellings, stables, water tanks and windmills, and a storage building with a stable
1917	Developed with one dwelling and three sheds on the northern portion, with vacant land on the southern portion (428 North California Street)	NORTH: No significant changes EAST: Dwellings and flats SOUTH: Dwellings and flats WEST: North California Street followed by dwellings, sheds/garages, and a store with a garage

Year(s)	Subject Property Description (Listed Address)	Adjoining Site Descriptions
1950	Developed with a commercial building on the southern portion, occupied as a tent/ awning/upholstery/mattress facility including a storefront. A wool storage addition and parking garage are noted on the northern portion (418-420 North California Street)	NORTH: Developed with a lawn mower repair store and warehouses EAST: Developed with two apartment buildings, an undertaker and chapel building, and parking garages SOUTH: Developed with a gasoline station with auto service shop (410-414 North California Street, 515 East Lindsay Street), and apartment buildings WEST: North California Street followed by a multi-tenant store building, a large clinic building, and a store and ice cream store building
1972	No significant changes, with the exception that the parking garage is no longer present	NORTH: Developed with an office building and warehouses EAST: Developed with an apartment building, a parking lot and an undertaker and chapel building SOUTH: Developed with apartment buildings and the former gas station/auto repair building labeled as commercial WEST: North California Street followed by an office building, a store, two clinic buildings and vacant land

- Historical industrial uses - refer to Section 3.0

Adjoining Site(s):

- Historical gas station/auto repair shop - refer to Section 3.0

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. Refer to the appendices for a complete list of historical subject property tenants identified by EDR. Directories were reviewed in approximate five-year increments from 1916-2020, non-inclusive. The first listing for the subject property appeared in 1906.

The following table summarizes the results of the city directory search for the subject property.

3.4 Historical Topographic Maps

AEI reviewed historical topographic maps utilizing EDR. Historical topographic maps were reviewed for the years 1913-2021, non-inclusive. No additional historical information was obtained from available topographic maps.

3.5 Chain of Title

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

3.6 Other Historical Sources

On January 9, 2025, AEI reviewed historical newspaper articles and advertisements on newspapers.com. The following information was obtained under the address 420 North California Street:

- 1896 advertisement for carpet and feather cleaning, awnings and upholstery, Manthey Bros
- 1900 advertisement for carpet and feather cleaning, Manthey Bros
- 1901 advertisement for carpet and mattress cleaning, Manthey Bros
- 1902 advertisement for carpet cleaning and mattress renovation, Manthey Bros
- 1911 advertisement for carpet and furniture cleaning and renovation, Manthey Bros
- 1929 advertisement for Manthey Bros now has a sterilization and fumigation plant for purchased furniture, bedding, pillows, etc.
- 1934 advertisement for rug and furniture cleaning, Manthey Bros
- 1936 advertisement for rug cleaning, Manthey Bros
- 1941 advertisement for furniture and rug cleaning, as well as awnings, tents, canvas goods, window shades, and venetian blinds, Manthey Bros
- 1943 advertisement for furniture and rug cleaning, as well as awnings, tents, canvas goods, window shades, and venetian blinds, Manthey Bros
- 1965 advertisement for Econo-Car of Stockton, a car rental business at 408-420 N California Street
- 1966 advertisement for Manthey Brothers, which was established in 1893

Refer to Section 3.0 for further discussion.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The minimum search distance from the federal and state environmental records database listings specified in the current ASTM Standard E1527 is included in Section 5.1. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below as well as the total number of sites identified, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion, if any, are identified and further discussed in Section 5.1.

Facility Name	Mike Auto Ctr, Jo Manthey Bros Uphol
Address	420 N California
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	HWTS, HAZNET, EDR HIST CLEANER
Comments	Mike Auto Ctr is listed on the HWTS and HAZNET databases from 1989 to 2001, and the listing is currently inactive. The HAZNET/HWTS databases show the tenant generated 0.336 tons of aqueous solution with total organic residues less than 10 percent in 1995. Based on the short duration of time that these wastes were reported to be generated in the HWTS database which were disposed of off-site under waste manifest control and regulatory oversight, as well as the lack of observed interior potential subsurface conduits, the former use of these materials is not expected to constitute a REC. The EDR HIST CLEANERS database lists “Manthey Broes C E and HM Carpet Cleaners” at the subject property in 1906, 1911, 1940. The EDR HIST CLEANERS database does not report a release, but rather identifies businesses, based on name, that may have been associated with cleaning activities. Refer to Section 3.0 for further discussion.

Facility Name	Auto Detail Shop Automotive Detail
Address	514 East Fremont Street
Distance & Direction	Adjoining to the North
Hydrologic Position	Down-gradient
Databases Listed	EDR HIST AUTO
Comments	The EDR HIST AUTO database lists “Copes Autos” identified as an automotive repair shop, at the adjoining site to the north in 1998-1999. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. Based on the lack of a documented release and the groundwater gradient, the review of regulatory agency files for this site was not deemed necessary, and the site does not represent a REC.

Facility Name	A & R Distributors
Address	254 East Fremont Street
Distance & Direction	Adjoining to the East
Hydrologic Position	Cross-gradient
Databases Listed	HWTS (x2), EDR HIST AUTO
Comments	A& R Distributors is listed on the HWTS database from 1989 to 1998 and the listing is currently inactive. The EDR HIST AUTO database lists “Autohaus of Stockton", "Fowler AUtomotive", " Auto Service Co Repr", "A&R Auto Service Center” identified as General Automotive Repair, at the adjoining site to the east from 1976-1999. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been

	associated with automotive activities. Based on the lack of a documented release and the groundwater gradient, the review of regulatory agency files for this site was not deemed necessary, and the site does not represent a REC.

Facility Name	Bardales Auto Repair, Hector Auto Repair, Mutaher Abdulla, California Auto Repair & Tire Service
Address	408 North California Street
Distance & Direction	Adjoining to the South
Hydrologic Position	Up-gradient
Databases Listed	HWTS (x3), HAZNET, EDR HIST AUTO (x3)
Comments	Bardales Auto Repair is listed on the HWTS database from 1990 to 1997, the listing is currently inactive. No further pertinent information was identified for this listing. Mutaher Abdulla was listed on the HWTS and HAZNET databases in 2014, the NAICS description is "Car Washes", and the listing is currently inactive. The HAZNET database shows generation of "unspecified oil-containing waste". California Auto Repair & Tire Service is listed on the HWTS database in 1998, the listing is currently inactive. No further pertinent information was identified for this listing. The EDR HIST AUTO database lists auto repair shops and gas stations at the adjoining site to the south from 1955 to 2014. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. Refer to Section 3.0 for further discussion.

Facility Name	Waldorf Chiropractic
Address	425 North California Street
Distance & Direction	Adjoining to the West
Hydrologic Position	Cross-gradient
Databases Listed	HWTS
Comments	Waldorf Chiropractic is listed on the HWTS database in 1993, the listing is currently inactive. No further pertinent information was identified for this listing. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site does not represent a REC.

Facility Name	EISELE D L AUTO REPR
Address	521 Lindsay E
Distance & Direction	Adjoining to the South
Hydrologic Position	Cross-gradient
Databases Listed	EDR HIST AUTO
Comments	The EDR HIST AUTO database lists two auto repair shops at the adjoining site to the south from 1950 to 1955. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site does not represent a REC.

Facility Name	Turnquist Flying A Serv 8,

Address	408 N California Street
Distance & Direction	Adjoining to the South
Hydrologic Position	Up-gradient
Databases Listed	EDR HIST AUTO
Comments	The EDR HIST AUTO database lists "Turnquist Flying A Serv 8" identified as Gasoline Station at the adjoining site to the south from 1955 to 1965. The EDR HIST AUTO database does not report a release, but rather identifies businesses, based on name, that may have been associated with automotive activities. According to a review of historical sources, the adjoining site to the direction was formerly a gasoline service station from at least 1950 until 1984. This site was not listed on the regulatory database as a current or former UST site; however, based on the former use, it is apparent that USTs were located on site. The locations of the former USTs at this site are unknown. Based on the proximity of this site to the subject property, the inferred direction of groundwater flow, and the unknown management and/or removal practices utilized in connection with the USTs, the potential exists that, if a release of petroleum hydrocarbons occurred at this site, the subsurface of the subject property may have also been impacted. A 2001 Limited soil investigation found there was no evidence of contamination on the site. The former gas station previously contained one 5,000, two 2,000, and one 1,000 gallon underground storage tanks. The report states that it is unknown whether or not the storage tanks remain on site. Two GeoProbe borings were pushed, each with two soil samples taken, and laboratory tests found BTEX, Total petroleum hydrocarbons as gasoline, total petroleum hydrocarbons as diesel, MTBE TBA DIPE, ETBE, and TAME were all non detect in the soil samples. Assessment of the subject property does not indicate that the subject property would be investigated as a source of this contamination, and therefore, it is unlikely that the subject property owner would be responsible for any cleanup costs associated with a release at this site. Nevertheless, the site may pose a threat for vapor phase contaminant migration to the subject property. While no TPH concentrations were detected in the subsurface investigation, the site was not surveyed for groundwater and vapor intrusion, which could impact the subject property, and the potential contamination constitutes a REC.

5.2 Vapor Migration

A vapor encroachment condition (VEC) is the presence or likely presence of Chemical(s) of Concern (COC) vapors in the vadose zone of the subject property caused by the release of vapors from contaminated soil and/or groundwater either on or near the subject property.

AEI conducted a limited screening for potential VECs that may affect the subject property. The VEC screening focused on the current and historical usage of the subject property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons.

Determination of AOC

To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, AEI utilized the approximate minimum search distance defined by the current ASTM E2600 of 1,760 feet (1/3 mile) from the subject property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, AEI utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC

was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. AEI calculated the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology:

Non-petroleum hydrocarbon COCs:

- 1,760 feet in the upgradient direction
- 365 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if Light, Non-Aqueous Phase Liquid, (LNAPL, i.e. floating product) is suspected:

- 528 feet in the upgradient direction
- 165 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if LNAPL is *not* suspected:

- 528 feet in the upgradient direction
- 95 feet in the cross-gradient direction
- 30 feet in the downgradient position

Additional adjustment of the AOC may be conducted based on AEI's professional judgment.

5.3 Per- and Polyfluoroalkyl Substances (PFAS)

As defined in Section 3.2.36 of the current ASTM Standard E1527, hazardous substance means "those substances defined as a hazardous substance pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts." Hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA are outside of the scope of the current ASTM Standard E1527.

On July 8, 2024, the Final EPA rule became effective that designates perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as CERCLA hazardous substances. Per the current ASTM Standard E1527, once this rule went into effect, these substances are evaluated within the scope of this standard, and a release or likely release of PFOA and/or PFOS is considered a REC.

Other than PFOA/PFOS, compounds classified as PFAS are not currently classified as hazardous substances under CERCLA, and thus the potential presence of PFAS (other than PFOA/PFOS) is outside of the scope of the current ASTM Standard E1527, and does not constitute a REC at this time. However, the report User should be aware that regulatory criteria and classifications are subject to change.

AEI's research of potential PFAS contamination focuses on the release/likely release of PFOA/PFOS. However, if additional information pertaining to other PFAS is identified, AEI will also assess/discuss these compounds, as deemed applicable/appropriate within the scope of this investigation.

It should be noted that AEI's screening of PFOA/PFOS and other PFAS is based solely on review of the resources cited within this report. Identification, or lack thereof, is not a warranty that PFOA/PFOS or other PFAS contamination is present or absent at a site. Additionally, it should be noted that given the evolving nature of science and regulatory oversight of PFOA/PFOS and other PFAS, additional sources of contamination may exist at the subject property, adjoining sites and/or other nearby sites that were not identified by the limited data and screening tools cited within this report.

5.3.1 PFAS-Related Regulatory Database Listings

As an initial screening tool for potential PFAS contamination, AEI reviewed PFAS-related database listings from EDR.

5.3.2 Potential On-Site PFAS Sources/Concerns

AEI researched the standard historical and regulatory sources cited within this report to determine if a release or likely release of PFOA/PFOS has occurred at the subject property.

A voluntary industry phaseout of PFOA and PFOS was first implemented in the late 1990s and was fully implemented for PFOS by 2002 and PFOA by 2015. Although PFOA and PFOS have been generally phased out since 2015, studies have found that precursor PFAS in wastewater treatment systems may form PFOA and PFOS. As such, even after 2015, the presence of PFAS in wastewater discharges is considered a likely source of PFOA and PFOS contamination.

The subject property operated as a tent/awning/upholstery/mattress facility from at least 1893 to 1985. On-site operations included carpet/rug cleaning as well as furniture, tent, and awning manufacturing and repairs. Given the nature of site operations, it is considered likely that operations included the use and handling of PFAS including PFOA/PFOS. Limited information on past PFAS use was identified, however, it should be noted that PFAS has been largely unregulated in the past and so documentation verifying past PFAS use is often limited or non-existent.

Refer to Section 3.0 for further discussion.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to the current ASTM Standard E1527, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative	Not identified	N/A	N/A	N/A	Not interviewed; refer to Section 1.5
Key Site Manager	Tony Vargas	December 30, 2024	In Person	2021	Interviewed; see Interview Summary table below

INTERVIEW SUMMARY

Question	Owner (Representative)/Key Site Manager Response/ Comment
Are you aware of any known plans for site redevelopment or change in site use?	No
Do you have any knowledge of previous environmental investigations conducted on site?	No
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	No
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/ or petroleum products?	No
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	No
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	No
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No
Are you aware of any fire incidents requiring fire department response?	No

6.1.2 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to the current ASTM Standard E1527 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Information not provided
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	Information not provided
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Information not provided
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Information not provided
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the	Information not provided

property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	Information not provided

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI during this assessment. A summary of this information follows:

Phase I Environmental Site Assessment (418 North California Street, Stockton, California), prepared by AdvancedGeo, Inc. (AGI) (April 5, 2024)

This report describes the subject property generally consistent with current conditions.

A summary of report findings is below:

- Based on a review of historical documents, the subject property was developed with a single-family residence and a two-story carpet and upholstery cleaning business in 1895. Sometime between 1895 and 1917, all structures on the property were removed. San Joaquin County Assessor Records indicate that by the end of 1917, the current three-story building was erected. Initially, the first floor of this building was used by Manthey Brothers Awnings, while Manthey Apartments occupied the remaining two floors. However, by 1990, commercial activities within the building ceased, and it was converted into additional residential units.
- No previous Phase I or II Environmental Site Assessments were provided to AGI by the user and/or property owner during the course of this Phase I.
- This assessment revealed no evidence of Business Environmental Risks in connection with the subject property, except for the potential presence of asbestos-containing materials and lead base paint. AGI recommended full asbestos and lead paint surveys be performed by a licensed contractor prior to any remodeling or demolition.
- No RECs, CRECs, HRECs, de minimis conditions, or other non-ASTM-defined environmental issues were identified by AGI
- AGI had no other recommendations for additional investigations at the subject property at the time.

A copy of the report is included in the appendices.

Note: As the above documentation was not prepared by AEI, the information obtained was not verified for accuracy and a critique of the information contained therein is beyond the scope of this assessment.

6.4 Environmental Lien and AUL Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.1 Subject Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Drains, Sumps, and Clarifiers

A sump was observed in the basement of the subject property building. The sump is used to capture and pump rain water to the public sewer system. No hazardous substances were observed around the sump. Based on this information and the residential nature of use of the subject property, the presence of a sump is not a REC.

7.1.2 Other

The subject property is currently occupied by residential tenants. Small amounts of cleaning supplies were observed on site. All materials were packaged in consumer quantities and no signs of inappropriate material handling were observed. Based on the nature of these materials, the presence or use of these materials at the subject property is not considered evidence of a REC.

Approximately 100-gallons of maintenance products, such as paints, cleaners, lubricants, etc. were observed in the maintenance areas. The containers were properly labeled and stored. No signs of spills or leaks were observed in conjunction with the containers. No significant staining or evidence of release of any of the materials was observed during the site reconnaissance. Based on the relatively small quantities observed and the lack of evidence of the mismanagement of these materials, the use of these materials on site is not considered evidence of a REC.

7.2 Adjoining Property Reconnaissance Findings

During the site reconnaissance, AEI did not observe any of the items listed in the above Reconnaissance Findings Summary table.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970s. Common ACMs include pipe-covering, insulating cement, insulating block, refractory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials (the Green Book). In 1973 the NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989 the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most US firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property building, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (acoustical and smooth)	Walls and ceilings
Ceiling tile	Ceiling systems
Thermal systems insulations, packings, and gaskets	Heating systems, cooling systems, domestic and heating and cooling piping, ductwork, and other equipment
Floor tile and associate mastics, flooring felts, and papers (under hardwood/other)	Floors
Vinyl sheet flooring and adhesives	Floors
Cove base and associated mastics	Walls
Ceramic tile adhesives and grouts	Walls, floors, and ceilings
All adhesives	Mirrors, wall coverings, construction, etc.

Grout and caulking	Windows and doors
Gypsum board, tape, and joint compound	Wall and ceiling systems
Insulation materials	Walls, ceilings, and attic spaces
Roofing materials (felts, rolled, shingle, flashings, adhesives, tar, and insulations)	Roof and parapet wall systems
Brick and block, mortars	Walls

The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.

8.2 Lead-Based Paint

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

Under OSHA, lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. Therefore, all LBP is considered LCP. Conversely, LCP may not meet the criteria to be considered LBP in accordance with HUD guidelines or some states' definition of LBP.

It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present; however, some paints utilized after 1978 will be LCP under OSHA. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property building, there is a potential that LBP is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. However, based on the potential presence of LBP and residential nature of occupancy, AEI recommends the owner implement a LBP O&M Plan which stipulates that the assessment, repair and maintenance of damaged painted surfaces be performed to protect the health and safety of the building occupants. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 Naturally-Occurring Radon

Radon is a naturally-occurring, odorless, and invisible radioactive gas. According to the United States EPA, radon is the second leading cause of lung cancer. Natural radon levels vary and are closely related to geologic formations, soils, and foundation construction. Radon may enter buildings through basement sumps or other openings such as cracks and other holes in foundations.

US EPA Map

In 1993 the United States EPA prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map identifies counties of the US with the greatest potential for elevated indoor radon levels based on indoor radon measurement data, geology, soil parameters, and foundation types. The map divides the country into three radon zones based on potential radon accumulation, but is not to be considered predictive of radon accumulation.

The 1993 EPA map identifies the following three radon zones:

- Zone 1 - Highest potential for radon accumulation; average indoor radon levels may be greater than 4 pCi/L
- Zone 2 - Moderate potential for radon accumulation; average indoor radon levels may be between 2 and 4 pCi/L
- Zone 3 - Low potential for radon accumulation; average indoor radon levels may be less than 2 pCi/L

It is important to note that elevated levels of radon can be found in all three zones, and the EPA and other agencies recommend site-specific testing to determine radon levels at a specific property. Therefore, while the map does give an indication of the propensity of radon gas accumulation in structures in a county, elevated radon levels may be found in all three radon zones.

It should also be noted that EPA's 1993 Map of Radon Zones, while useful, was based on limited data collected prior to 1993 and therefore may be supplemented with available state-developed or other data to further understand the radon potential for a specific area.

According to the US EPA, the radon zone level for the County is Zone 3, which has a low potential for radon accumulation.

Radon sampling would be necessary to determine site-specific radon conditions. Radon sampling was not requested as part of this assessment.

8.4 Suspect Mold or Microbial Growth Conditions

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials, including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property building to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of suspect mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/24/2024 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where

environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2024 has revealed that there are 25 ENVIROSTOR sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that

there are 45 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 49 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 11 E MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 41 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 14 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	The case was closed in October 2017 as site conditions meet the State Water Board s Low-threat Underground Storage Tank Case Closure Policy (Policy). The Site operated as gas station from as early as 1922. Three USTs were removed in January 1992. The site investigation revealed that the most impacted area was the southeast corner of the property where USTs were located until they were removed in 1967. Several phases of investigation have resulted in many soil borings, monitoring wells, vapor extraction wells, soil vapor survey wells and ozone infusion wells being installed. Chevron excavated petroleum-impacted soil from certain areas of the Site. Chevron performed ozone injection from December 2000 to April 2005 to address groundwater impacts. Chevron conducted a soil vapor survey in 2009 and concluded site conditions do not pose an unacceptable risk to human health via the indoor air pathway. Chevron evaluated residual soil concentrations and concluded screening levels established in the Policy for the direct contact and outdoor air exposure pathway were not exceeded. Based on groundwater monitoring conducted through 2012, the residual groundwater plume is defined, decreasing in concentration, expected to meet background conditions in a reasonable amount of time, and does not threaten surface water bodies or water supply wells. Chevron destroyed all remediation and monitoring wells, and removed all residual waste materials in 2017.

Site History:	In May 1991, the responsible party s contractor removed four underground storage tanks (USTs), product piping and dispensers. The removed USTs were a 3,000-gallon diesel UST, a 3,000-gallon unleaded gasoline UST, a 3,000-gallon leaded gasoline UST, and a 550-gallon waste oil UST. Gasoline, diesel and associated chemicals were detected in soil samples collected beneath the removed USTs and dispensers. An environmental case was opened in June 1991. Additional testing of soil and groundwater was done between February 2000 and present. Groundwater wells were installed in May 2000. Regular groundwater samples have been collected since 2000. Cleanup activities have been performed. Between 2007 and 2011, the responsible party s consultant removed air from the soil and cleaned it. Between 2012 and 2018, the responsible party s consultant injected hydrogen peroxide into groundwater to destroy gasoline and diesel. As of June 2024, the extent of the release is undefined. The responsible party needs to complete more work to determine the extent of the gasoline and diesel impacts and to evaluate risk to human health.

Site History:	Site is located on the southwest corner of California Street and East Miner Avenue in Stockton, in the parking lot for the building at 242 Sutter Street. The location is the site of a former Chevron facility; at least two generations of tanks are documented at the site, but there are no records of the tank removals. Site investigation activites were initiated by the current property owner, Sutter Office Center, in May 2000 with the installation of geoprobe soil borings. Soil and grab groundwater samples were collected for analysis and confirmed there are petroleum hydrocarbons in the subsurface soil and groundwater. Groundwater monitoring wells were first installed in 2001; CPT borings in 2003; additional groundwater monitoring wells in 2005, 2007 and 2009; additional borings in 2007. Chevron was named a responsible party and took over the site investigation in 2006.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	December 3, 2004- One underground storage tank (UST), located in the city of Stockton right-of-way under the west sidewalk, was removed. Soil samples were collected from beneath the tank. Analytical results of the soil reported petroleum hydrocarbon impact. January 2005- The tank pit area was excavated to try and dig out the contamination; they did not, deeper soil samples more highly impacted than the shallow ones. February 19, 2008- Soil boring SB-1 was advanced within the former tank pit to 50 ft. below surface grade (bsg). Analytical results yielded 590,000 micrograms per liter (g/L) of total petroleum hydrocarbons as diesel (TPH-d) in groundwater sampled at 34 ft. bsg. TPH-d was also detected in 4 soil samples collected within SB-1 between 20-48 ft. bsg; the highest concentration being 4,500 milligrams per kilogram (mg/kg) at 29.5 ft. bsg. (Report dated

CITY OF STOCKTON REDEVELOPMENT AGENCY (Continued) **S127815468**

3/24/2008) November 12 and 13, 2008- CPT borings were advanced up to 100 ft. bsg. CPT-1 (4 separate borings) yielded as high as 3,600 g/L TPH-d in groundwater sampled at 61 ft. bsg and yielded as high as 3,500 mg/kg TPH-d in soil sampled at 60 ft. bsg. CPT-2 (3 separate borings) yielded 5,800 g/L TPG-d in the sole groundwater sample taken from 41 ft. bsg and yielded as high as 4,600 mg/kg TPH-d in soil sampled at 35 ft. bsg. CPT-3 (one boring) has no available chemical analytical data. (Report dated 1/5/2009)

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Comments: Pursuant to the MOU, DTSC has reviewed a Phase I Environmental assessment report and a preliminary asbestos survey for the Channel Street Clinic. The property, owned by the Agricultural Workers' Health Centers, Inc. (AWHC), contains two vacant connected buildings which previously housed a children's day care center. AWHC is proposing to remodel the buildings to accommodate the relocation of thier current Stockton health clinic. A Supplemental Phase I Environmental Assessment Report was prepared by DTSC and concluded that no action was needed for this property, there is no contamination on the property.

transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Returned to compliance on 09/06/2019. OBSERVATION: Copies of uniform manifests for the disposal of used coolant, used oil, used oil filters (paper and metal mixed) and oily absorbent for 2019 were not found on site. Business has only been at this address for a few months. REGULATION: Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the EHD.

Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 09/24/2019. OBSERVATIONS: This facility has a EPA ID number to manage hazardous waste, but it registered under a different address. REGULATION: A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an ID number. If you or your business generates more than 100 kg of RCRA hazardous waste and/or more than one kg of acutely hazardous waste, then you need to obtain an EPA ID number. All others must obtain a State ID number. Go to the DTSC web site https://dtsc.ca.gov/apply-for-hazardous-waste-epa-id-number/ for the form to apply for an ID number. CORRECTIVE ACTION: Immediately obtain an ID number or update existing ID number to manage hazardous waste and submit evidence to the EHD.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	<<<<<<<<<<START Public Notes>>>>>>>>> Underground storage tanks were removed from the site in 1990. A site investigation began in 1993 with the installation of seven groundwater monitoring wells and six soil borings. Additional hydropunch and cone penetrometor test borings have been installed to determine the vertical and lateral extent of the petroleum release from the tanks. Routine groundwater montioring continues. 11-22-2010: EHD approves Dual Phase Extraction Pilot test-3 wells to be installed. 3-25-2011: EHD directes RP to enact DPE pilot test. April 7, 2011: DPE pilot test conducted onsite. May 13, 2011: DPE Pilot test report and RAP work plan (DPE) received and approved by the EHD. No additional investigation required at this time. Once the DPE system is installed and in operation, soil vapor and ground water concentration trends can be evaluated over time.

RWQCB Region: CENTRAL VALLEY RWQCB (REGION 5S)
Site History: Three underground storage tanks were removed form the site in October 1987; soil samples collected from beneath the tanks were reported to contain petroleum hydrocarbon contamination. An overexcavation of the tank pit area was conducted in January 1988. A site investigation was initiated in June 1997 with the installation of three groundwater monitoring wells and seven soil borings. Between March 1998 and December 2001 seven additional groundwater monitoring wells, eight soil borings two soil vapor extraction wells and two air sparging wells were installed. A soil vapor extraction/air sparging feasibility test was conducted in March 2000. Remediation by vapor extraction began in December 2002; the air sparging system was started in February 2003. A work plan to conduct a feasibility study for ozone infustion was approved for implementation in March 2009.

Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL VALLEY RWQCB (REGION 5S)
Site History:	The Site property is currently a vacant lot, and the current property owner intends to develop the Site property into low-income housing. During the investigation of the Toyota Town Inc. petroleum under ground storage tank (UST) case on the Site property, PCE was discovered in soil gas. PCE soil gas concentrations are above the environmental screening level (ESL; regulatory threshold) for residential use. Central Valley Water Board staff have requested that the current property owner work with us to develop and implement a vapor mitigation system for the planned residential buildings.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently

JF DONALDSON (Continued) **1000191154**

implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

RWQCB Region: CENTRAL VALLEY RWQCB (REGION 5S)
Site History: In January 2008, the responsible party s consultant removed one 500-gallon underground storage tank (UST) from beneath the sidewalk (City of Stockton right-of-way) near the corner of Minor Street and Hunter. Gasoline and diesel and associated chemicals were detected in soil samples collected from the UST excavation. An environmental case was opened. Between 2008 and present, the responsible party s consultant tested soil and groundwater. Gasoline and diesel were detected in soil and groundwater. Groundwater wells were installed in 2010. Regular groundwater samples have been collected since 2010. Cleanup activities have been performed. Between 2013 and 2014, the responsible party s consultant injected hydrogen peroxide into groundwater to destroy gasoline, and in February and October 2023, the responsible party s consultant removed air from the soil and cleaned it. As of June 2024, the responsible party needs to collect additional groundwater samples. They need to do more cleanup activities. They need to perform additional testing to determine if there is a risk to human health.

Site History:	The case was opened in October 1994 after a release of gasoline was detected in soil samples. In August 1996, the consultant removed two gasoline underground storage tanks (USTs), one 1,000-gallon and one 8,000-gallon, and two gasoline dispensers. Inspection notes stated the USTs were corroded. Holes were seen in the 1,000-gallon UST. Gasoline odor was noted in both excavations. Gasoline compounds were detected in soil samples collected from beneath the former dispensers and the bottom of the UST excavation. Additional soil and groundwater testing was done between 2001 and 2005. Groundwater wells were installed and sampled between 2002 and December 2004. The wells were destroyed in 2005 before redevelopment of the property. As of June 2024, the extent of release is undefined. The responsible party needs to complete more work to determine the extent of gasoline impacts and to evaluate risk to human health.

Site History:	On 02 July 2004, one 3,000-gallon heating oil UST was discovered under the sidewalk on the north side of East Main Street. During tank removal free product was encountered in the soil underlying the UST. A total of 5 cubic yards of impacted soil was excavated from the UST pit and disposed of offsite. Additional remediation was not warranted. The Site's responsible party investigated soil, soil gas, and groundwater at the Site from 2009 to 2021. Petroleum hydrocarbons is soil greater than Low-Threat Closure Policy residential concentration criteria have not been detected since 2017. Petroleum hydrocarbons have not been detected in soil gas samples above Low-Threat Closure Policy residential soil gas concentration criteria. Petroleum hydrocarbons were not detected in four quarters of groundwater sampling between April 2021 and February 2022. Central Valley Water Board staff have evaluated Site conditions against the Low-Threat Closure Policy and concluded the Site meets the criteria for closure and recommended issuing a no further action letter for closure of this case. The Central Valley Water Board closed the case in July 2023.
