FINDINGS AND OPINIONS

Significant Data Gap(s) is defined by the current ASTM Standard E1527 as a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

AEI did not identify significant data gaps which affected our ability to identify RECs.

Recognized Environmental Condition (REC) is defined by the current ASTM Standard E1527 as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

- The western adjoining site, 216 N California Street, is listed as a LUST Cleanup Site under Global ID T0607755189. A review of the CA State Water Resources Control Board GeoTracker database identifies this case as Open as of April 22, 2013. In December 2004, Thorpe Oil removed one 1,500-gallon capacity, single-walled steel heating oil UST from the sidewalk along California Street adjacent to the site at the northwest corner. The UST was approximately 100 feet west of the subject property. The UST had signs of corrosion, dark staining was observed in the soil beneath the UST, and petroleum odors were noted in the excavation and excavated soil. Following removal of the UST, soil samples were collected from the bottom of the north and south ends of the UST pit at the direction of the San Joaquin County Environmental Health Department (SJCEHD). Laboratory analysis of the samples indicated the presence of total petroleum hydrocarbons as diesel (TPHd) at concentrations of 3,300 milligrams per kilogram (mg/kg) and 6,300 mg/kg at the north and south ends, respectively. In January of 2005, the tank pit area was excavated to try and remove the contamination, however deeper soil samples were identified to be highly impacted.

  In February 2008, Condor advanced a soil boring (SB1) through the center of the former heating oil UST pit, in the sidewalk adjacent to the site. Condor collected four soil samples at depths ranging from 20 feet to 48 feet bgs and one grab groundwater sample from a depth of 34 feet bgs that were submitted for laboratory analysis. The laboratory analysis indicated the presence of up to 4,500 mg/kg TPHd, 1.3 mg/kg ethylbenzene, and 6.2 mg/kg xylenes from the 29.5 foot soil sample, 0.32 mg/

kg toluene from the 36 foot soil sample, and 590,000 micrograms per liter (µg/L) TPHd, 4.2 µg/L toluene, 1.4 µg/L ethylbenzene, and 79 µg/L xylenes from the grab groundwater sample.

In November 2008, Condor advanced three Cone Penetration Test (CPT) borings (CPT1, CPT2, and CPT3) onsite. The CPT borings were advanced in conjunction with an Ultra-Violet Optical Screening Tool (UVOST) to assist with the vertical delineation of hydrocarbon impacted soil at the site. Companion borings were advanced as necessary to collect soil and grab groundwater samples at each CPT boring location. Condor submitted six soil samples and three groundwater samples for laboratory analysis from the CPT boring locations. Laboratory analysis of the soil samples indicated the presence of up to 4,600 mg/kg TPHd (CPT2 and 35 feet bgs), 0.073 mg/kg ethylbenzene (CPT1 at 72 feet bgs), and 5.4 mg.kg xylenes (CPT-1 at 60 feet bgs). Laboratory analysis of the grab groundwater samples indicated the presence of up to 5,800 µg/L TPHd, 3.3 µg/L ethylbenzene, and 14 µg/L xylenes from grab sample CPT2 at 41 feet bgs.

In July 2017, Condor collected three soil vapor samples (SVP-1, SVP-2, and SVP-3) at onsite locations. Laboratory analysis of the vapor samples indicated the presence of up to 29 micrograms per cubic meter (µg/m3) benzene in the sample from SVP-1 with the remaining requested petroleum hydrocarbon constituents (including ethylbenzene and naphthalene) reported as non-detect.

According to a letter issued by the RWQCB on May 24, 2024, additional site assessment including analysis of MTBE, soil and groundwater sampling was planned for the site.

Based on the available subsurface data and the groundwater gradient, the potential exists that a release of petroleum hydrocarbons may have impacted the subsurface of the subject property. Assessment of the subject property does not indicate that the subject property would be investigated as a source of this contamination, and therefore, it is unlikely that the subject property owner would be responsible for any cleanup costs associated with a release at this site. Nevertheless, the release from the adjoining site has the potential to impact the subject property, which is considered evidence of a REC. A VEC was also identified in connection with this REC. Refer to Section 5.2 for further discussion. Due to the nature of the REC, it is not depicted on Figure 2: Site Map and a photograph is not included in Appendix B.

Controlled Recognized Environmental Condition (CREC) is defined by the current ASTM Standard E1527 as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the current ASTM Standard E1527 as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory

authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/ or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- Due to the age of the subject property building, there is a potential that ACMs are present. During the site reconnaissance damaged drywall systems were observed in the maintenance room. Based on the potential presence of ACMs, AEI recommends the property owner implement an O&M Plan which stipulates that the assessment, repair and maintenance of damaged materials be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.
- Due to the age of the subject property building, there is a potential that LBP is present. During the site reconnaissance, damaged painted surfaces were observed in the maintenance room. Based on the potential presence of LBP and nature of occupancy, AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control and correction of possible LBP hazards. Immediate repair of any damaged LBP is also recommended. Following consultation with a certified Lead Risk Assessor and repair of damaged LBP, AEI recommends the owner implement an O&M Plan which stipulates that the assessment, repair and maintenance of damaged painted surfaces be performed to protect the health and safety of the building occupants. More stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-21, of 517 Channel Street, Stockton, San Joaquin County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

As listed in the Findings section above, this assessment has revealed recognized environmental conditions, controlled recognized environmental conditions, and/or significant data gaps in connection with the subject property.

RECOMMENDATIONS

AEI recommends the following:

- Subsurface Investigation

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 517 Channel Street, Stockton, San Joaquin County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with the most current ASTM E1527 Standard associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by the current ASTM Standard E1527. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under the current ASTM Standard E1527.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. The current ASTM Standard E1527 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the current ASTM Standard E1527.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- The subject property owner was not interviewed during this assessment. Based on information obtained from other sources, including the key site manager, this limiting condition is not expected to alter the overall findings of this assessment.
- Due to the size of the property, AEI observed a representative sample of interior spaces. AEI observed the following units: 103 300, 306, 309. Due to the residential nature of occupancy, this limited inspection method is expected to be adequate for the purposes of this assessment.
- The Stockton Building Department was contacted for information on the subject property in order to identify historical tenants/use, property development, and/ or hazardous substance/petroleum product handling. Due to the time frame of this assessment, records were not available for review. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the findings of this assessment.
- Due to the large volume of materials within portions of the building, direct visual observation of many of the floor and wall areas of the building was not possible. Features may be present that were not observed during AEI's field reconnaissance. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.

1.6 Data Failure and Data Gaps

According to the current ASTM Standard E1527, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to the current ASTM Standard E1527, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to the current ASTM Standard E1527, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to the current ASTM Standard E1527, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failures were identified during the course of this assessment:

Data Failure	As noted in Section 3.0, the earliest historical resource obtained during this assessment indicated that the subject property was developed with a hotel. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure. However, as it is assumed that the subject property would have been previously used for similar purposes, if not undeveloped, this data failure is not expected to significantly alter the findings of this assessment. As noted in Section 3.0, historical sources were not obtained at five-year intervals dating back to first developed use. However, it is assumed that during this time period the subject property would have been residential, if not undeveloped or commercial. Therefore, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs, Sanborn fire insurance maps, city directories, historical topographic maps, agency records, previous report, interview

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of Central Valley Low Income Housing Corporation. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with Central Valley Low Income Housing Corporation and AEI's contract and Terms and Conditions dated November 25, 2024. The limitation of liability defined in the contracted terms is the aggregate limit of AEI's liability to the client and all relying parties.

Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL RECORDS REVIEW

Reasonably ascertainable standard historical sources as outlined in the current ASTM Standard E1527 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, historical topographic maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1895	Unknown use/Data failure; refer to Section 1.6.1	N/A
1895	The subject property is developed with a portion of the Grand Central Hotel with garage/stables and a shed, details and addressing largely illegible	Sanborn map
1896-1916	Unknown use/Data failure; refer to Section 1.6.1	N/A

1924-Present	Developed with the current apartment building, occupied by residential tenants (517 Channel Street)	Aerial photographs, Sanborn maps, agency records, city directories, site reconnaissance, interview, previous report

AEI did not identify potential environmental concerns in association with the current or historical use of the subject property.

If available, copies of historical sources are provided in Appendix D.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The minimum search distance from the federal and state environmental records database listings specified in the current ASTM Standard E1527 is included in Section 5.1. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below as well as the total number of sites identified, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion, if any, are identified and further discussed in Section 5.1.

Hydrologic Position	Down-gradient
Databases Listed	UST, LUST (2), UST FINDER RELEASE, Cortese, Notify 65, CERS
Comments	The UST listing identifies this site under Facility ID FA0015804. This site was formerly equipped with one (1) 500-gallon other petroleum UST, which is since inactive. The UST FINDER RELEASE is associated with the LUST case. The NOTIFY 65 listing identifies this site Issue Date as December 21, 2004. The CERS listing identifies this site under Site ID 847859 and CERS ID T0607755189 as a LUST Cleanup Site. The Cortese listing and LUST listing identifies this site as a LUST Cleanup Site under Global ID T0607755189. A review of the CA State Water Resources Control Board GeoTracker database identifies this case as Open as of April 22, 2013. In December 2004, Thorpe Oil removed one 1,500-gallon capacity, single-walled steel heating oil UST from the sidewalk along California Street adjacent to the site at the northwest corner. The UST was approximately 100 feet west of the subject property. The UST had signs of corrosion, dark staining was

observed in the soil beneath the UST, and petroleum odors were noted in the excavation and excavated soil. Following removal of the UST, soil samples were collected from the bottom of the north and south ends of the UST pit at the direction of the San Joaquin County Environmental Health Department (SJCEHD). Laboratory analysis of the samples indicated the presence of total petroleum hydrocarbons as diesel (TPHd) at concentrations of 3,300 milligrams per kilogram (mg/kg) and 6,300 mg/kg at the north and south ends, respectively. In January of 2005, the tank pit area was excavated to try and remove the contamination, however deeper soil samples were identified to be highly impacted.

In February 2008, Condor advanced a soil boring (SB1) through the center of the former heating oil UST pit, in the sidewalk adjacent to the site. Condor collected four soil samples at depths ranging from 20 feet to 48 feet bgs and one grab groundwater sample from a depth of 34 feet bgs that were submitted for laboratory analysis. The laboratory analysis indicated the presence of up to 4,500 mg/kg TPHd, 1.3 mg/kg ethylbenzene, and 6.2 mg/kg xylenes from the 29.5 foot soil sample, 0.32 mg/kg toluene from the 36 foot soil sample, and 590,000 micrograms per liter (µg/L) TPHd, 4.2 µg/L toluene, 1.4 µg/L ethylbenzene, and 79 µg/L xylenes from the grab groundwater sample.

In November 2008, Condor advanced three Cone Penetration Test (CPT) borings (CPT1, CPT2, and CPT3) onsite. The CPT borings were advanced in conjunction with an Ultra-Violet Optical Screening Tool (UVOST) to assist with the vertical delineation of hydrocarbon impacted soil at the site. Companion borings were advanced as necessary to collect soil and grab groundwater samples at each CPT boring location. Condor submitted six soil samples and three groundwater samples for laboratory analysis from the CPT boring locations. Laboratory analysis of the soil samples indicated the presence of up to 4,600 mg/kg TPHd (CPT2 and 35 feet bgs), 0.073 mg/kg ethylbenzene (CPT1 at 72 feet bgs), and 5.4 mg.kg xylenes (CPT-1 at 60 feet bgs). Laboratory analysis of the grab groundwater samples indicated the presence of up to 5,800 µg/L TPHd, 3.3 µg/L ethylbenzene, and 14 µg/L xylenes from grab sample CPT2 at 41 feet bgs.

In July 2017, Condor collected three soil vapor samples (SVP-1, SVP-2, and SVP-3) at onsite locations. Laboratory analysis of the vapor samples indicated the presence of up to 29 micrograms per cubic meter (µg/m3) benzene in the sample from SVP-1 with the remaining requested petroleum hydrocarbon constituents (including ethylbenzene and naphthalene) reported as non-detect.

According to a letter issued by the RWQCB on May 24, 2024, additional site assessment including analysis of MTBE, soil and groundwater sampling was planned for the site.

Based on the available subsurface data and the groundwater gradient, the potential exists that a release of petroleum hydrocarbons may have impacted the subsurface of the subject property. Assessment of the subject property does not indicate that the subject property would be investigated as a source of this contamination, and therefore, it is unlikely that the subject property owner would be responsible for any cleanup costs associated with a release at this site. Nevertheless, the release from the adjoining site has the potential to impact the subject property, which is considered evidence of a REC.

5.2 VAPOR MIGRATION

A vapor encroachment condition (VEC) is the presence or likely presence of Chemical(s) of Concern (COC) vapors in the vadose zone of the subject property caused by the release of vapors from contaminated soil and/or groundwater either on or near the subject property.

AEI conducted a limited screening for potential VECs that may affect the subject property. The VEC screening focused on the current and historical usage of the subject property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons.

Determination of AOC

To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, AEI utilized the approximate minimum search distance defined by the current ASTM E2600 of 1,760 feet (1/3 mile) from the subject property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, AEI utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. AEI calculated the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology:

Non-petroleum hydrocarbon COCs:

- 1,760 feet in the upgradient direction
- 365 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if Light, Non-Aqueous Phase Liquid, (LNAPL, i.e. floating product) is suspected:

- 528 feet in the upgradient direction
- 165 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if LNAPL is *not* suspected:

- 528 feet in the upgradient direction
- 95 feet in the cross-gradient direction
- 30 feet in the downgradient position

Additional adjustment of the AOC may be conducted based on AEI's professional judgment.

5.3 Per- and Polyfluoroalkyl Substances (PFAS)

As defined in Section 3.2.36 of the current ASTM Standard E1527, hazardous substance means "those substances defined as a hazardous substance pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts." Hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA are outside of the scope of the current ASTM Standard E1527.

On July 8, 2024, the Final EPA rule became effective that designates perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as CERCLA hazardous substances. Per the current ASTM Standard E1527, once this rule went into effect, these substances are evaluated within the scope of this standard, and a release or likely release of PFOA and/or PFOS is considered a REC.

Other than PFOA/PFOS, compounds classified as PFAS are not currently classified as hazardous substances under CERCLA, and thus the potential presence of PFAS (other than PFOA/PFOS) is outside of the scope of the current ASTM Standard E1527, and does not constitute a REC at this time. However, the report User should be aware that regulatory criteria and classifications are subject to change.

AEI's research of potential PFAS contamination focuses on the release/likely release of PFOA/PFOS. However, if additional information pertaining to other PFAS is identified, AEI will also assess/discuss these compounds, as deemed applicable/appropriate within the scope of this investigation.

It should be noted that AEI's screening of PFOA/PFOS and other PFAS is based solely on review of the resources cited within this report. Identification, or lack thereof, is not a warranty that PFOA/PFOS or other PFAS contamination is present or absent at a site. Additionally, it should be noted that given the evolving nature of science and regulatory oversight of PFOA/PFOS and other PFAS, additional sources of contamination may exist at the subject property, adjoining sites and/or other nearby sites that were not identified by the limited data and screening tools cited within this report.

5.3.1 PFAS-Related Regulatory Database Listings

As an initial screening tool for potential PFAS contamination, AEI reviewed PFAS-related database listings from EDR.

Location	PFAS Database Listing Identified	PFAS Database Listing Not Identified	Comments
Subject Property		✔	N/A
Adjoining and/or Nearby Site(s)		✔	N/A

5.3.2 Potential On-Site PFAS Sources/Concerns

AEI researched the standard historical and regulatory sources cited within this report to determine if a release or likely release of PFOA/PFOS has occurred at the subject property.

A voluntary industry phaseout of PFOA and PFOS was first implemented in the late 1990s and was fully implemented for PFOS by 2002 and PFOA by 2015. Although PFOA and PFOS have been generally phased out since 2015, studies have found that precursor PFAS in wastewater treatment systems may form PFOA and PFOS. As such, even after 2015, the presence of PFAS in wastewater discharges is considered a likely source of PFOA and PFOS contamination.

Potential Source	Yes	No
Past or present industrial operations that potentially included the use of PFAS (if "yes" see *Potential PFAS Sources from Industrial Uses* section/table below)		✔
The use or discharge of AFFF (if "yes" see *Potential Sources of AFFF* section/table below)		✔
Electroplating (1950s-present) NOTE: Electroplating (specifically hard chromium plating) is an industrial activity where PFAS-containing mist suppressants may have been used		✔
Agricultural uses, specifically 1970s-present that included application of biosolids/WWTP sludge that potentially contained PFAS		✔
Wastewater treatment plant (WWTP) (1960s-present)		✔
Landfill operations / waste disposal areas (1960s-present)		✔
Mining / quarrying / oil production		✔
Commercial car wash (1989-2010)		✔

AEI did not identify any obvious potential sources of PFAS contamination originating from on-site operations/sources.

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI during this assessment. A summary of this information follows:

Phase I Environmental Site Assessment (517 East Channel Street, Stockton, California), prepared by AdvancedGeo, Inc. (AGI) (April 4, 2025)

This report describes the subject property generally consistent with current conditions.

A summary of report findings is below:

- Based on a review of historical documents, the subject property was originally developed as part of the Grand Central Hotel, along with the adjacent properties to the west, before 1895. The area of the hotel that the subject property now occupies was designated as a lawn area with a storage shed and laundry room on the north portion of the subject property. Between 1905 and 1917, the Grand Central Hotel was demolished and the subject property was cleared. In 1917, a portion of a storage building was present on the northeastern corner of the subject property. In addition, according to San Joaquin County.
- No previous Phase I or II Environmental Site Assessments were provided to AGI by the user and/or property owner during the course of this Phase I.
- AGI reviewed LUST records for the western adjoining property, and provided the following discussion:
    - "The Central Valley RWQCB (Region 5S) oversees the City of Stockton Redevelopment Agency's Leaking Underground Storage Tank (LUST) cleanup site at 216 North California Street. The case began on 3 December 2004, when a 1,500-gallon capacity underground storage tank (UST) containing heating oil was removed due to corrosion signs and observed soil staining indicating petroleum leakage. Subsequent soil samples confirmed petroleum hydrocarbon presence. In February 2008, sampling confirmed hydrocarbon contamination, with elevated levels of total petroleum hydrocarbons (TPH), specifically TPH as diesel (TPH-d), in soil and groundwater samples. Further investigations in November 2008 using Cone Penetration Test (CPT) borings identified significant TPH-d concentrations, highlighting persistent environmental impacts. In 2017, three soil-vapor samples showed minor contamination near

the former UST but no detection of contaminants reaching the subject property, indicating no contamination through the soil-vapor pathway to the property."

- This assessment revealed no evidence of Business Environmental Risks in connection with the subject property, except for the potential presence of asbestos-containing materials and lead base paint. AGI recommended full asbestos and lead paint surveys be performed by a licensed contractor prior to any remodeling or demolition.
- No RECs, CRECs, HRECs, de minimis conditions, or other non-ASTM-defined environmental issues were identified by AGI
- AGI had no other recommendations for additional investigations at the subject property other than those identified above in Business Environmental Risks, at the time.

A copy of the report is included in the appendices.

Note: As the above documentation was not prepared by AEI, the information obtained was not verified for accuracy and a critique of the information contained therein is beyond the scope of this assessment.

6.4 Environmental Lien and AUL Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.1 Subject Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed (Yes/ No)	Non-PCB Label (Yes/No)
Subsurface	One	PG&E	Unknown	No	No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

According to Pacific Gas & Electric (PG&E), no PCB-containing materials have been used in the manufacturing of transformers since 1969. In 1990, PG&E implemented a remediation program to remove and/or replace all PCB-containing transformers. According to PG&E, over 99% of transformers considered to be PCB-containing that existed prior to 1990 have been removed or replaced. Based on this information, the on-site transformer is not considered a REC.

7.1.2 Drains, Sumps, and Clarifiers

One floor drain was observed in the north side of the subject property. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drain. Based on the lack of hazardous substances near the drain, the presence of the drain is not considered evidence of a REC.

7.1.3 OTHER

The subject property is currently occupied by residential tenants. Small amounts of cleaning supplies were observed on site. All materials were packaged in consumer quantities and no signs of inappropriate material handling were observed. Based on the nature of these materials, the presence or use of these materials at the subject property is not considered evidence of a REC.

Approximately 20-gallons of maintenance products, such as paints, cleaners, lubricants, etc. were observed in the maintenance area. The containers were properly labeled and stored. No signs of spills or leaks were observed in conjunction with the containers. No significant staining or evidence of release of any of the materials was observed during the site reconnaissance. Based on the relatively small quantities observed and the lack of evidence of the mismanagement of these materials, the use of these materials on site is not considered evidence of a REC.

7.2 ADJOINING PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI did not observe any of the items listed in the above Reconnaissance Findings Summary table.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970s. Common ACMs include pipe-covering, insulating cement, insulating block, refractory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials (the Green Book). In 1973 the NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989 the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most US firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property building, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (acoustical and smooth)	Walls and ceilings
Ceiling tile	Ceiling systems
Thermal systems insulations, packings, and gaskets	Heating systems, cooling systems, domestic and heating and cooling piping, ductwork, and other equipment
Floor tile and associate mastics, flooring felts, and papers (under hardwood/other)	Floors
Vinyl sheet flooring and adhesives	Floors
Cove base and associated mastics	Walls
Ceramic tile adhesives and grouts	Walls, floors, and ceilings
All adhesives	Mirrors, wall coverings, construction, etc.

Grout and caulking	Windows and doors
Gypsum board, tape, and joint compound	Wall and ceiling systems
Insulation materials	Walls, ceilings, and attic spaces
Roofing materials (felts, rolled, shingle, flashings, adhesives, tar, and insulations)	Roof and parapet wall systems
Brick and block, mortars	Walls

The observed suspect ACMs were observed in good condition at the time of the site reconnaissance with the exception of the materials listed in the table below:

Material	Location	Damaged Area (SF)	Friable
Drywall Systems	Maintenance room	10	Yes

Based on the potential presence of ACMs, AEI recommends the property owner implement an O&M Plan which stipulates that assessment, repair and maintenance of damaged materials be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb ACMs.

8.2 Lead-Based Paint

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

Under OSHA, lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. Therefore, all LBP is considered LCP. Conversely, LCP may not meet the criteria to be considered LBP in accordance with HUD guidelines or some states' definition of LBP.

It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present; however, some paints utilized after 1978 will be LCP under OSHA. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property building, there is a potential that LBP is present. During the site reconnaissance, damaged walls were observed in the maintenance room. Based on the potential presence of LBP and nature of occupancy, AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control and correction of possible LBP hazards. Immediate repair of any damaged LBP is also recommended. Following consultation with a certified Lead Risk Assessor and repair of damaged LBP, AEI recommends the owner implement an O&M Plan which stipulates that the assessment, repair and maintenance of damaged painted surfaces be performed to protect the health and safety of the building occupants. More stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 Naturally-Occurring Radon

Radon is a naturally-occurring, odorless, and invisible radioactive gas. According to the United States EPA, radon is the second leading cause of lung cancer. Natural radon levels vary and are closely related to geologic formations, soils, and foundation construction. Radon may enter buildings through basement sumps or other openings such as cracks and other holes in foundations.

US EPA Map

In 1993 the United States EPA prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map identifies counties of the US with the greatest potential for elevated indoor radon levels based on indoor radon measurement data, geology, soil parameters, and foundation types. The map divides the country into three radon zones based on potential radon accumulation, but is not to be considered predictive of radon accumulation.

The 1993 EPA map identifies the following three radon zones:

- Zone 1 - Highest potential for radon accumulation; average indoor radon levels may be greater than 4 pCi/L
- Zone 2 - Moderate potential for radon accumulation; average indoor radon levels may be between 2 and 4 pCi/L
- Zone 3 - Low potential for radon accumulation; average indoor radon levels may be less than 2 pCi/L

It is important to note that elevated levels of radon can be found in all three zones, and the EPA and other agencies recommend site-specific testing to determine radon levels at a specific property. Therefore, while the map does give an indication of the propensity of radon gas accumulation in structures in a county, elevated radon levels may be found in all three radon zones.

It should also be noted that EPA's 1993 Map of Radon Zones, while useful, was based on limited data collected prior to 1993 and therefore may be supplemented with available state-developed or other data to further understand the radon potential for a specific area.

According to the US EPA, the radon zone level for the County is Zone 3, which has a low potential for radon accumulation.

Radon sampling would be necessary to determine site-specific radon conditions. Radon sampling was not requested as part of this assessment.

8.4 Suspect Mold or Microbial Growth Conditions

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and

high humidity are the most common locations of mold growth. Building materials, including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property building to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of suspect mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2024 has revealed that there are 29 ENVIROSTOR sites within approximately 1 mile of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within

approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 49 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Site History:	December 3, 2004- One underground storage tank (UST), located in the city of Stockton right-of-way under the west sidewalk, was removed. Soil samples were collected from beneath the tank. Analytical results of the soil reported petroleum hydrocarbon impact. January 2005- The tank pit area was excavated to try and dig out the contamination; they did not, deeper soil samples more highly impacted than the shallow ones. February 19, 2008- Soil boring SB-1 was advanced within the former tank pit to 50 ft. below surface grade (bsg). Analytical results yielded 590,000 micrograms per liter (g/L) of total petroleum hydrocarbons as diesel (TPH-d) in groundwater sampled at 34 ft. bsg. TPH-d was also detected in 4 soil samples collected within SB-1 between 20-48 ft. bsg; the highest concentration being 4,500 milligrams per kilogram (mg/kg) at 29.5 ft. bsg. (Report dated 3/24/2008) November 12 and 13, 2008- CPT borings were advanced up to 100 ft. bsg. CPT-1 (4 separate borings) yielded as high as 3,600 g/L TPH-d in groundwater sampled at 61 ft. bsg and yielded as high as 3,500 mg/kg TPH-d in soil sampled at 60 ft. bsg. CPT-2 (3 separate borings) yielded 5,800 g/L TPG-d in the sole groundwater sample taken from 41 ft. bsg and yielded as high as 4,600 mg/kg TPH-d in soil sampled at 35 ft. bsg. CPT-3 (one boring) has no available chemical analytical data. (Report dated 1/5/2009)

IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	Site is located on the southwest corner of California Street and East Miner Avenue in Stockton, in the parking lot for the building at 242 Sutter Street. The location is the site of a former Chevron facility; at least two generations of tanks are documented at the site, but there are no records of the tank removals. Site investigation activites were initiated by the current property owner, Sutter Office Center, in May 2000 with the installation of geoprobe soil borings. Soil and grab groundwater samples were collected for analysis and confirmed there are petroleum hydrocarbons in the subsurface soil and groundwater. Groundwater monitoring wells were first installed in 2001; CPT borings in 2003; additional groundwater monitoring wells in 2005, 2007 and 2009; additional borings in 2007. Chevron was named a responsible party and took over the site investigation in 2006.

(Policy). The Site operated as gas station from as early as 1922. Three USTs were removed in January 1992. The site investigation revealed that the most impacted area was the southeast corner of the property where USTs were located until they were removed in 1967. Several phases of investigation have resulted in many soil borings, monitoring wells, vapor extraction wells, soil vapor survey wells and ozone infusion wells being installed. Chevron excavated petroleum-impacted soil from certain areas of the Site. Chevron performed ozone injection from December 2000 to April 2005 to address groundwater impacts. Chevron conducted a soil vapor survey in 2009 and concluded site conditions do not pose an unacceptable risk to human health via the indoor air pathway. Chevron evaluated residual soil concentrations and concluded screening levels established in the Policy for the direct contact and outdoor air exposure pathway were not exceeded. Based on groundwater monitoring conducted through 2012, the residual groundwater plume is defined, decreasing in concentration, expected to meet background conditions in a reasonable amount of time, and does not threaten surface water bodies or water supply wells. Chevron destroyed all remediation and monitoring wells, and removed all residual waste materials in 2017.

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

detected in soil samples. In August 1996, the consultant removed two gasoline underground storage tanks (USTs), one 1,000-gallon and one 8,000-gallon, and two gasoline dispensers. Inspection notes stated the USTs were corroded. Holes were seen in the 1,000-gallon UST. Gasoline odor was noted in both excavations. Gasoline compounds were detected in soil samples collected from beneath the former dispensers and the bottom of the UST excavation. Additional soil and groundwater testing was done between 2001 and 2005. Groundwater wells were installed and sampled between 2002 and December 2004. The wells were destroyed in 2005 before redevelopment of the property. As of June 2024, the extent of release is undefined. The responsible party needs to complete more work to determine the extent of gasoline impacts and to evaluate risk to human health.

Site History: This site is at the current location of the County of San Joaquin Human Services Administration. April 1988- Nine underground storage tanks were removed from the site. Soil samples were collected from beneath the tanks; laboratory analysis reported petroleum hydrocarbon impact. December 1988- A site investigation began with the installation of groundwater monitoring wells. Petroleum hydrocarbon

impact to the groundwater was reported. August 1991-August 1996- Additional groundwater monitoring wells were installed to define the lateral extent of the plume. January 1998- A Corrective Action Plan for the site was submitted; recommendation was for remediation by natural attenuation. June 2006- The Corrective Action Plan was reviewed and additional data collection was recommended by the consultant. The site is not vertically defined. June 2008- Fieldwork began to install a deep boring and a deep well. The boring was completed, but during the well installation additional underground storage tanks were discovered beneath the sidewalk of Sutter Street at the corner with Washington Street. Ground penetrating radar was used to try and determine how many tanks were there; appears to be two. A tank removal plan and continuation of the site investigation is pending.

State Savings and Load constructed a two-story office building at the Site in 1961 and operated it as a bank until 1982. American Savings and Loan used the building from 1984 to 1988. The building is currently vacant. There are no records of a tank at the Site. The tank was likely excavated during construction of the building in 1961.

Site History:	In January 2008, the responsible party s consultant removed one 500-gallon underground storage tank (UST) from beneath the sidewalk (City of Stockton right-of-way) near the corner of Minor Street and Hunter. Gasoline and diesel and associated chemicals were detected in soil samples collected from the UST excavation. An environmental case was opened. Between 2008 and present, the responsible party s consultant tested soil and groundwater. Gasoline and diesel were detected in soil and groundwater. Groundwater wells were installed in 2010. Regular groundwater samples have been collected since 2010. Cleanup activities have been performed. Between 2013 and 2014, the responsible party s consultant injected hydrogen peroxide into groundwater to destroy gasoline, and in February and October 2023, the responsible party s consultant removed air from the soil and cleaned it. As of June 2024, the responsible party needs to collect additional groundwater samples. They need to do more cleanup activities. They need to perform additional testing to determine if there is a risk to human health.

Site History: In May 1991, the responsible party s contractor removed four underground storage tanks (USTs), product piping and dispensers. The removed USTs were a 3,000-gallon diesel UST, a 3,000-gallon unleaded gasoline UST, a 3,000-gallon leaded gasoline UST, and a 550-gallon waste oil UST. Gasoline, diesel and associated chemicals were detected in soil samples collected beneath the removed USTs and dispensers. An environmental case was opened in June 1991. Additional testing of soil and groundwater was done between February 2000 and present. Groundwater wells were installed in May 2000. Regular groundwater samples have been collected since 2000. Cleanup activities have been performed. Between 2007 and 2011, the responsible party s consultant removed air from the soil and cleaned it. Between 2012 and 2018, the responsible party s consultant injected hydrogen peroxide into groundwater to destroy gasoline and diesel. As of June 2024, the extent of the release is undefined. The responsible party needs to complete more work to determine the extent of the gasoline and diesel impacts and to evaluate risk to human health.

Site History:	Three underground storage tanks were removed form the site in October 1987; soil samples collected from beneath the tanks were reported to contain petroleum hydrocarbon contamination. An overexcavation of the tank pit area was conducted in January 1988. A site investigation was initiated in June 1997 with the installation of three groundwater monitoring wells and seven soil borings. Between March 1998 and December 2001 seven additional groundwater monitoring wells, eight soil borings two soil vapor extraction wells and two air sparging wells were installed. A soil vapor extraction/air sparging feasibility test was conducted in March 2000. Remediation by vapor extraction began in December 2002; the air sparging system was started in February 2003. A work plan to conduct a feasibility study for ozone infustion was approved for implementation in March 2009.

Site History:	The Site property is currently a vacant lot, and the current property owner intends to develop the Site property into low-income housing. During the investigation of the Toyota Town Inc. petroleum under ground storage tank (UST) case on the Site property, PCE was discovered in soil gas. PCE soil gas concentrations are above the environmental screening level (ESL; regulatory threshold) for residential use. Central Valley Water Board staff have requested that the current property owner work with us to develop and implement a vapor mitigation system for the planned residential buildings.

Site History:	<<<<<<<<<<START Public Notes>>>>>>>>> Underground storage tanks were removed from the site in 1990. A site investigation began in 1993 with the installation of seven groundwater monitoring wells and six soil borings. Additional hydropunch and cone penetrometor test borings have been installed to determine the vertical and lateral extent of the petroleum release from the tanks. Routine groundwater montioring continues. 11-22-2010: EHD approves Dual Phase Extraction Pilot test-3 wells to be installed. 3-25-2011: EHD directes RP to enact DPE pilot test. April 7, 2011: DPE pilot test conducted onsite. May 13, 2011: DPE Pilot test report and RAP work plan (DPE) received and approved by the EHD. No additional investigation required at this time. Once the DPE system is installed and in operation, soil vapor and ground water concentration trends can be evaluated over time.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	July 1997 groundwater contamination containing MtBE was noted at a non-operating Shell Station site located down-gradient from the ARCO station. February 1999 three 12,000 gallon underground storage tanks removed, contamination was noted under the tanks. The site investigation began after this with the installation of four groundwater monitoring wells. Between June 2000 and May 2004 additional groundwater monitoring wells, both shallow and deep, were installed. The site is defined; the problem area is around the MW-4/MW-8M/MW-8D/MW-12 cluster of wells located near the former dispenser island area. The EHD has requested interim remediation of these wells to lower contaminant concentrations. Quarterly batch extractions began in third quarter 2008. The EHD sent notification to the Regional Water Quality Control Board on 6/10/10 of their intent to close the site. In preparation for closure, destruction of all groundwater monitoring wells began on 10/18/10.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. Site History:	May 1995 - Four USTs and associated piping were removed from the site. June 1997 - Soil borings B-1 through B-3 were advanced on-site. September 1997 - Three soil borings (B-4 through B-6) were advanced and completed as monitoring wells (B-4/MW-1, B-5/MW-2, and B-6/MW-3). November 2002 - Cone penetration test (CPT) boring CPT-1 was advanced on-site; CPT-2 was advanced on-site without sounding; CPT-3 and CPT-4 were advanced off-site. September 2005 - MW-4 through MW-7 were installed. Additional investigation is needed to define the lateral extent of the petroleum hydrocarbon plume. An ozone injection bench-scale pilot test has been conditionally approved by the San Joaquin County Environmental Health Department. Remediation was not performed. All thirteen monitoring wells were destroyed in May and June 2013.
