EDR Historical Topo Map Report

11/26/24

Site Name:	Client Name:
502869	AEI Consultants
517 Channel Street	2500 Camino Diablo
Stockton, CA 95202	Walnut Creek, CA 94597
EDR Inquiry # 7834582.4	Contact: Christian Cagonot

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Re: California Public Records Act Request dated December 3, 2024 (8651634) – 517 Channel Street

I am writing in response to your request for public records dated December 3, 2024, pursuant to the Public Records Act ("Act") (Gov. Code § 7920.000, *et seq*., formerly Gov. Code § 6250, *et seq*.), requesting Fire, Building, and Planning Department records for 517 Channel Street.

Please see the fire inspection report, historical permits, and Certificate of Occupancy (41 pages).

There are no reported fire incidents or active code cases at this address.

For record of any petroleum product and/or hazardous materials, aboveground storage tank (AST) and/or underground storage tank, please contact San Joaquin County Environmental Health as the County is the custodian of these records: (209) 468-3420 or https://www.sjgov.org/department/envhealth/home or

If you have any questions, please contact me at (209) 937-5089.

Sincerely,

Rosie Calderon
City Manager's Office

cc: Taryn Jones, Deputy City Attorney

Stockton Fire Department

Occupancy: **JIMENEZ GARY P & HELEN G TRUST**
Occupancy ID: **97805**
Address: **517 Channel ST Stockton CA 95202**

Form: SFD GENERAL INSPECTION

Inspection Type: **R2 INSPECTION**
Inspection Date: **10/31/2024** By: Guzman, Eric (103675)
Time In: **10:09** Time Out: **10:37**
Authorized Date: **11/06/2024** By: Guzman, Eric (103675)

Inspection Topics:

GENERAL INFORMATION

Current Business License posted?

Current City of Stockton or SJ County Business License shall be posted for current occupant.

Status: Required
Notes: Expired. Remove this one. Post new one if available.

Has contact information changed?

Has any of the customer information changed since last inspection? If so, new information shall be recorded and submitted to support staff for updates.

Status: Required
Notes: A copy of this report will be mailed to the address on file. Please contact me so I can add an email address to your account.

BUILDING INFORMATION

Knox box in place?

Confirm the keys are current, update as needed.

Status: YES
Notes:

Fire alarm?

Does the FACP display read "NORMAL"? Verify annual service through service records kept in the document box on the FACP. Is signage in place identifying the FACP location?

Status: YES
Notes:

ACCESS

Provide an approved Knox Box. Box shall be located in an area designated by the Fire Code Official.

CFC 506

Status: Required
Notes: 1 key installed for main entrance

Need keys for pull station reset and FACP (Fire Alarm control panel)

Call me when you have copies to install

Provide approved address numbers in a position to be plainly legible from the street or road fronting the property. Numbers shall contrast in color from background. Number shall not be spelled out. Each character shall not be less than 12 inches high. Where the building cannot be viewed from the public way a monument pole or other sign shall be used to identify the structure. Address identification shall be maintained. Numbers shall be 4 inches high for residential.

SMC 15.12.030

Status: Required
Notes: Replace or repaint unit door numbers.

EXITING

Fire escape stairways and balconies shall be examined for structural adequacy and safety by a registered design professional or other acceptable to the Fire Code Official every five (5) years.

CFC 1104.16.5.1

Status: Required
Notes: This will take some time. Keep me updated on how long you need to accomplish this and send me a copy of the report via Email when available.

Egress doors shall be readily openable from the inside without the use of key or special knowledge. Exception: In A Occupancies with an occupant load of 300 or less, and in places of religious worship, the main exterior door or doors is permitted to be equipped with key operated locking devices from the egress side if a sign is posted stating: This door to remain unlocked when building is occupied.

CFC 1010.2

Status: Required
Notes: Replace these with approved hardware. You shall be able to exit without a key.

Means of egress shall be illuminated when the building space is occupied. Exit signs shall be internally or externally illuminated at all times; signs shall be connected to an emergency power system that provides illumination for not less than 90 minutes in case of primary power loss in areas with two or more exits.

CFC 1008.2

Status: Violation Noted
Notes: repair or replace

EXTINGUISHING AND ALARM SYSTEMS

Carbon Monoxide detection shall be installed and maintained as required.

CFC 915

Status: Required
Notes: **Ensure all units have a working CO detector installed in the room that has a fossil-fuel burning appliance (Stove, water heater, fireplace, etc), or any room adjacent it (water heater is in outside/inside closet, then any room sharing a wall with that closet requires a CO detector). Smoke/CO combination detector is approved and encouraged**

If only batteries are needed, remove the detector from its bracket and look for the manufacturers (Mfr) date on the backside of the detector. IF THE DATE IS 2013 OR OLDER, THE DETECTOR NEEDS TO BE REPLACED, AS THEY HAVE A 10-YEAR LIFE EXPECTANCY

Smoke detection shall be installed and maintained as required.

CFC Ch. 9

Status: Required
Notes: **Ensure all units have a working CO detector installed in the room that has a fossil-fuel burning appliance (Stove, water heater, fireplace, etc), or any room adjacent it (water heater is in outside/inside closet, then any room sharing a wall with that closet requires a CO detector). Smoke/CO combination detector is approved and encouraged**

If only batteries are needed, remove the detector from its bracket and look for the manufacturers (Mfr) date on the backside of the detector. IF THE DATE IS 2013 OR OLDER, THE DETECTOR NEEDS TO BE REPLACED, AS THEY HAVE A 10-YEAR LIFE EXPECTANCY

Fire alarm system shall be serviced and tested annually.

CFC Chapter 9

Status: Required
Notes: Send me a copy of the current service report via email.

For future inspections make sure company installs an inspection sticker on panel and provides a copy of the most current report with the panel.

EXTINGUISHERS

Provide annual service. Service shall be performed by a licensed contractor.

CFC 906

Status: Approved
Notes: Nice work thank you!

Due this month*

MISCELLANEOUS

Other

CFC

Status: Required
Notes: Make sure all doors get signage indicating what kind of room it leads to (utility, Storage, Employee only.. etc)

Provide permanently installed and easily recognizable signage to identify fire department equipment, equipment locations, and main utility shutoffs - including gas, electrical, water, and solar (rapid shut down).

CFC 509.1 Fire Code Official shall determine signage and required locations.

Status: Required
Notes: Make sure all utility shut offs are marked with corresponding unit number

Additional Time Spent on Inspection:

Category	Start Date / Time	End Date / Time

Notes: No Additional time recorded

Total Additional Time: 0 minutes
Inspection Time: 28 minutes
Total Time: 28 minutes

Summary:

Overall Result: Disapproved

Inspector Notes: read report and call me with questions 209 598 7766

reinspection after 11/20/24

Closing Notes:

By order of the Fire Chief and Fire Marshal. All non-compliant issues shall be completed within the noted re-inspection date. Additional charges shall incur after the first re-inspection at the prevailing hourly rate, in increments of one hour. Approval as the result of this inspection shall not be construed to be an approval of a violation of the provisions of this code or of other ordinances of the jurisdiction. LICENSED CONTRACTORS DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

CONTRACTOR: Green Electric

LICENSE NO. 407181

LICENSE TYPE C-10 DATE 10-11-83

STOCKTON BUS. LIC. NO. 80

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason:(Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.).

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Sec. _____ B. & P.C. for this reason _____

Date _____ Owner _____

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

WORKERS' COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.) Policy No. _____

Company _____

☐ Certified copy is hereby furnished. Expires 1-16-84

☑ Certified copy is filed with the city building inspection department.

Date 10-11-83 Applicant Vernon R. Wellman

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

This section need not be completed if the permit is for one hundred dollars ($100) or less.)

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date _____ Applicant _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

LICENSED CONTRACTORS DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

CONTRACTOR
LICENSE NO. 289555
LICENSE TYPE C-39 DATE 9-28-81

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Sec. _____, B. & P.C. for this reason _____

Date _____ Owner _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

This section need not be completed if the permit is for one hundred dollars ($100) or less.

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date _____ Applicant _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

SEARCH RESULTS (73)
GETTING STARTED
To find the site you are looking for, you can:
Use the Search Bar above
Enter any identifying information into the search bar above, and both the Results list and the map will populate with any relevant results. This is a general search and will return results for each word in the search bar.
OR
Manipulate the Map
Focus in on a specific location using a mouse and the zoom tools or click on a bubble and the map will zoom to the location.
ADDITIONAL HELP
Simple Search
Enter any text into the keyword search. The results are based on each word. Using quotes does not create a phrase.
Filter
Items listed under the Filter tab limit your search results to the selected items. Filtering is applied in addition to the text you enter in the search box.
Criteria
Use the drop down menu for specific search terms. Unlike the simple search, this tool uses all

IX. REMEDIAL ACTION

REMEDIAL ACTION	BEGIN DATE	END DATE	DESCRIPTION
Excavation	1/26/2005	1/26/2005	Tried to dig out of contamination; didn't work. Had to stop because of the limitations of the backhhoe.

X. GENERAL COMMENTS

December 3, 2004- One underground storage tank (UST), located in the city of Stockton right-of-way under the west sidewalk, was removed. Soil samples were collected from beneath the tank. Analytical results of the soil reported petroleum hydrocarbon impact.

January 2005- The tank pit area was excavated to try and dig out the contamination; they did not, deeper soil samples more highly impacted than the shallow ones.

February 19, 2008- Soil boring SB-1 was advanced within the former tank pit to 50 ft. below surface grade (bsg). Analytical results yielded 590,000 micrograms per liter (µg/L) of total petroleum hydrocarbons as diesel (TPH-d) in groundwater sampled at 34 ft. bsg. TPH-d was also detected in 4 soil samples collected within SB-1 between 20-48 ft. bsg; the highest concentration being 4,500 milligrams per kilogram (mg/kg) at 29.5 ft. bsg. (Report dated 3/24/2008)

November 12 and 13, 2008- CPT borings were advanced up to 100 ft. bsg. CPT-1 (4 separate borings) yielded as high as 3,600 µg/L TPH-d in groundwater sampled at 61 ft. bsg and yielded as high as 3,500 mg/kg TPH-d in soil sampled at 60 ft. bsg. CPT-2 (3 separate borings) yielded 5,800 µg/L TPG-d in the sole groundwater sample taken from 41 ft. bsg and yielded as high as 4,600 mg/kg TPH-d in soil sampled at 35 ft. bsg. CPT-3 (one boring) has no available chemical analytical data. (Report dated 1/5/2009)

1.0 INTRODUCTION

On behalf of the City of Stockton (the City), Stantec Consulting Services Inc. (Stantec) is pleased to submit this *Revised Data Assessment Work Plan and Path to Closure Review* for additional site assessment activities at 216 N. California Street, Stockton, California (the site; **Figure 1**). This document addresses changes requested by the Central Valley Water Resources Control Board (CVWQRCB) in correspondence dated February 9, 2018 (**Appendix A**) to Stantec's December 1, 2017 Data Assessment Work Plan and Path to Closure Review. This work plan outlines a proposal to close data gaps under the California State Water Resources Control Board's (SWRCB's) Low-Threat Underground Storage Tank Case Closure Policy (LTCP) (SWRCB, 2012).

2.0 BACKGROUND

2.1 SITE DESCRIPTION

The site is currently a paved parking lot owned by the City of Stockton, located on the northeast corner of the intersection of North California and East Channel Streets (**Figure 1**). Based on historical research, a commercial building present at the site was demolished circa the 1970s and replaced with an asphalt paved parking lot.

Future property use has been proposed as a commercial space as part of the Open Window development project.

2.2 FUEL RELEASE IDENTIFICATION

The exact date of the fuel release cannot be determined. The release was discovered in December 2004 when an abandoned heating oil underground storage tank (UST) in the sidewalk adjacent to the property was removed. The heating oil tank was likely installed in the early part of the 20th century; however, had not been in active use for decades. Because of residual soil contamination that was observed during the removal of the heating oil UST (discussed further in Section 2.3 below), CVRWQCB opened Case #0001687 on December 3, 2004.

2.3 GEOLOGY AND HYDROGEOLOGY

2.3.1 Geology

Previous investigations at the site have identified predominantly fine-grained materials (silt to silty clay) to depths of approximately 35 feet below ground surface (bgs), underlain by material with increasing coarser grained materials (sandy silt to clayey silt with sand lenses) to depths of 100 feet below grade. Historical boring logs and cross-sections developed by Condor Earth (Condor) have been included as **Appendix B**.

2.3.2 Hydrogeology

Groundwater has been encountered at the site at approximately 30 feet bgs. A review of available data from open UST cases surrounding the site on GeoTracker have indicated that the predominant groundwater gradient flow direction is to the east-northeast. The depth to water in well U-1, located on the Former Unocal #0187 at 437 Miner Avenue, ranged from 22 to 47 feet bgs from 1994 through 2012. An evaluation of the local groundwater flow direction surrounding the site is included as **Appendix C**.

2.4 SUMMARY OF HISTORICAL ASSESSMENT ACTIVITIES

In December 2004, Thorpe Oil removed one 1,500-gallon capacity, single-walled steel heating oil UST from the sidewalk along California Street adjacent to the site at the northwest corner. The UST had signs of corrosion, dark staining was observed in the soil beneath the UST, and petroleum odors were noted in the excavation and excavated soil. Following removal of the UST, soil samples were collected from the bottom of the north and south ends of the UST pit at the direction of the San Joaquin County Environmental Health Department (SJCEHD). Laboratory analysis of the samples indicated the presence of total petroleum hydrocarbons as diesel (TPHd) at concentrations of 3,300 milligrams per kilogram (mg/kg) and 6,300 mg/kg at the north and south ends, respectively. A report of the UST removal activities was not available for Stantec's review; the historical information presented here was taken from Condor's March 2008 assessment report (Condor, 2008).

In February 2008, Condor advanced a soil boring (SB1) through the center of the former heating oil UST pit, in the sidewalk adjacent to the site. Condor collected four soil samples at depths ranging from 20 feet to 48 feet bgs and one grab groundwater sample from a depth of 34 feet bgs that were submitted for laboratory analysis. The laboratory analysis indicated the presence of up to 4,500 mg/kg TPHd, 1.3 mg/kg ethylbenzene, and 6.2 mg/kg xylenes from the 29.5 foot soil sample, 0.32 mg/kg toluene from the 36 foot soil sample, and 590,000 micrograms per liter (µg/L) TPHd, 4.2 µg/L toluene, 1.4 µg/L ethylbenzene, and 79 µg/L xylenes from the grab groundwater sample (Condor, 2008).

In November 2008, Condor advanced three Cone Penetration Test (CPT) borings (CPT1, CPT2, and CPT3) onsite. The CPT borings were advanced in conjunction with an Ultra-Violet Optical Screening Tool (UVOST) to assist with the vertical delineation of hydrocarbon impacted soil at the site. Companion borings were advanced as necessary to collect soil and grab groundwater samples at each CPT boring location. Condor submitted six soil samples and three groundwater samples for laboratory analysis from the CPT boring locations. Laboratory analysis of the soil samples indicated the presence of up to 4,600 mg/kg TPHd (CPT2 and 35 feet bgs), 0.073 mg/kg ethylbenzene (CPT1 at 72 feet bgs), and 5.4 mg.kg xylenes (CPT-1 at 60 feet bgs). Laboratory analysis of the grab groundwater samples indicated the presence of up to 5,800 µg/L TPHd, 3.3 µg/L ethylbenzene, and 14 µg/L xylenes from grab sample CPT2 at 41 feet bgs (Condor 2009).

In July 2017, Condor collected three soil vapor samples (SVP-1, SVP-2, and SVP-3) at onsite locations (**Figure 2**). The samples were collected in 1.4-liter Summa™ canisters from depths of three feet bgs. Laboratory analysis of the vapor samples indicated the presence of up to 29 micrograms per cubic meter (µg/m^3) benzene in the sample from SVP-1 with the remaining requested petroleum hydrocarbon constituents (including ethylbenzene and naphthalene) reported as non-detect. Additionally, the leak check compound (1,1-difluoroethane [1,1-DFA]) was not reported in the three soil vapor samples (Condor, 2017).

Historical sampling locations have been presented on **Figure 2** and tabulated historical soil and groundwater analytical results have been included in **Appendix D**.

3.0 LTCP CLOSURE EVALUATION

The current site conditions were compared to the closure criteria presented in the SWRCB LTCP (SWRCB, 2012). Based on current site use and projected site use in the near future, the site has been evaluated under commercial conditions.

3.1 GENERAL CRITERIA

- **The unauthorized release is located within the service area of a public water system?**
  Yes. Water service in the vicinity of the site is provided by the City of Stockton Municipal Utilities Department (MUD). MUD obtains approximately 25% of the water supply from groundwater wells and the remaining 75% from treated surface water sources.

- **The unauthorized release consists only of petroleum?**
  Yes. Based on historic data, only petroleum hydrocarbons have been detected in soil and groundwater at the site.

- **The unauthorized release has been stopped?**
  Yes. In 2004, the former heating oil UST was removed; it is assumed that the UST had not been actively used in at least 4 decades prior to removal.

- **Free product has been removed to the maximum extent practicable, per CCR Chapter 16 Section 2655 a-c?**
  Yes. Historical soil and groundwater sampling activities have not indicated the presence of free product at the site.

- **A Conceptual Site Model (CSM) has been developed?**
  No.

- **Secondary Source Removal has been addressed?**
  No., Historical reports do not document the removal of secondary source material. The need for source removal has not been evaluated to date.

- **Soil and groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code section 25296.15?**
  Not Applicable. Based on historical use of the former UST to store heating oil, methyl tertiary butyl ether (MTBE) is not expected to be present. Additionally, it is assumed that the UST was last used to store petroleum hydrocarbon compounds prior to the era in which MTBE was used as a gasoline additive.

- **Nuisance as defined by Water Code section 13050 does not exist at the site?**
  Yes. There are no known nuisance conditions at the site.

3.2 MEDIA-SPECIFIC CRITERIA

3.2.1 Groundwater-Specific Criteria

Groundwater sampling has been limited in extent since the case was opened in 2004 and insufficient data has been collected to fully evaluate to extent of residual petroleum hydrocarbons from the observed release at the former heating oil UST. Given the age of the release and the fuel type (heating oil) it is highly unlikely the dissolved heating oil plume is migrating beyond its current extent. A maximum concentration of 560,000 µg/L TPHd was **reported from soil boring SB1 in the center of the former UST location. This concentration has** been delineated to two orders of magnitude lower at a distance of less than 10 feet (3,600 µg/L, CPT-1) and at a distance of approximately 30 feet (5,800 µg/L, CPT-2) to the east of the former UST pit (cross-gradient direction). An analysis of site characteristics that define if the site meets the requirements for case closure under the groundwater-specific criteria of the LTCP is as follows:

- **Plume Length**: The exact extent of residual dissolved-phase petroleum hydrocarbon impacts from the heating oil UST release has not been established. In order to evaluate the extent and stability of the dissolved-phase petroleum hydrocarbon plume, Stantec proposes to install three groundwater monitoring wells (discussed below in Section 4.0).

- **Presence of Free Product**: Free product has not been reported in historical grab groundwater samples collected at the site. Additionally, dissolved phase analytical results have not been indicative of the presence of free product in groundwater at the site. It is not likely that free product is present. Stantec does not recommend any further evaluation of the potential presence of free product as part of the release.

- **Presence of Sensitive Receptor to Groundwater (Surface Water Body or Water Supply Well)**: The nearest surface water body is McLeod Lake, which is located approximately 1,600 feet west-southwest of the site boundary (historical upgradient direction). The potential presence of a water supply well in close proximity to the site has not been evaluated; therefore, Stantec recommends the performance of a sensitive receptor survey (scope of work presented in Section 4.0 below).

- **Presence of Dissolved Phase Benzene and MTBE**: Based on the nature of the release (heating oil) and the assumed age of the release (occurring prior to the 1970s), MTBE is not a contaminant of concern at the site. Historical groundwater sampling has not reported benzene above the laboratory reporting limits of 0.050 µg/L. Benzene is not likely present as part of the release at the site, based on the historical grab groundwater and soil samples collected at the site.

- **Vertical Delineation of Dissolved-Phase Petroleum Hydrocarbon Impacts**: In correspondence dated February 9, 2018, CVRWQCB staff requested the performance of a scope of work to assess the vertical extents of impacts to groundwater (**Appendix A**). Stantec believes that

dissolved-phase vertical petroleum hydrocarbon impacts have been adequately assessed through historical investigations at the site. The maximum concentration of TPHd in the source area, 560,000 µg/L, was reported from the grab groundwater sample collected at a depth of 34 feet bgs (first groundwater) from soil boring SB-1. Follow-up investigation directly adjacent to the source area, the advancement of CPT-1 at a distance of approximately 8 feet away from SB-1 and approximately 3 feet away from the edge of the former heating oil UST pit, demonstrated vertical delineation to a depth of 75 feet bgs. The two grab groundwater samples collected from the boring for CPT-1 showed a two order of magnitude decrease in concentration of TPHd at a depth of 61 feet bgs (3,600 µg/L) and a further decrease to non-detect at the maximum depth explored of 75 feet bgs. One grab groundwater sample was collected from soil boring CPT-2, advanced a distance of approximately 27 feet away from SB-1, at a depth of 41 feet bgs. The TPHd concentration reported in the grab groundwater sample was 5,800 µg/L, which indicates a two order of magnitude reduction in the dissolved phase TPHd concentrations in cross-gradient direction.

Based on the observed homogeneity in soil lithology at the site (**Appendix B**), the reduction of TPHd concentrations at or near first groundwater, and the vertical delineation observed directly adjacent to the source area, the performance of additional vertical delineation assessment at the site is not warranted.

The proposed scope of work below in Section 4.0 addresses how additional data will be collected to evaluate the site under the criteria presented above.

3.2.2 Petroleum Vapor Intrusion to Indoor Air

Based on the results Condor's July 2017 soil vapor assessment at the site, the petroleum vapor intrusion to indoor air pathway can be considered closed. CVWRCB concurred with this conclusion in correspondence dated February 9, 2018 (**Appendix A**).

3.2.3 Direct Contact and Outdoor Air Exposure

To date, soil samples within the top ten feet of the subsurface at the site have not been submitted for laboratory analysis. This is a data gap that will be addressed in the scope of work proposed below in Section 4.0.

4.0 PROPOSED SCOPE OF WORK

To close the data gaps under SWRCB LTCP, Stantec proposes to advance four hand auger soil borings (HA-1 through HA-4) at distances of approximately 10 feet away from the edges of the former heating oil UST to collect shallow soil samples, advance one soil boring (SB-2) for the collection of soil and grab groundwater samples, and the installation of three groundwater monitoring wells (MW-1, MW-2, and MW-3) to evaluate the extent and stability of the dissolved phase petroleum hydrocarbon plume. Additionally, Stantec proposes to perform a sensitive receptor survey within 1,500 feet of the site.

A summary of the proposed scope of work follows below. Proposed assessment locations are illustrated on **Figure 2** and Stantec's field procedures are included in **Appendix E**.

4.1 SITE HEALTH AND SAFETY PLAN

As required by the Occupational Safety and Health Administration Standard "Hazardous Waste Operations and Emergency Response" guidelines (29 CFR 1910.120), and by the California Occupational Health and Safety Administration "Hazardous Waste Operations and Emergency Response" guidelines (CCR Title 8, Section 5192), Stantec will create a site-specific Health and Safety Plan (HASP) prior to the commencement of field work. The HASP will outline potential hazards to Stantec field personnel during the field activities described herein. Job safety analyses for tasks to be performed by Stantec personnel (e.g., driving, soil sampling, air monitoring, etc.) will be included. The HASP will also include required personal protective equipment to be worn by Stantec field personnel for each task. In addition, Stantec will produce a Journey Management Plan (JMP) to prevent losses associated with motor vehicle incidents. A copy of Stantec's HASP and JMP will be distributed to subcontractors prior to field work, and will be available on-site during field activities.

4.2 PERMITTING AND NOTIFICATIONS

Stantec will obtain a monitoring well and soil boring installation permit, or permits as necessary, from SJCEHD. Additionally, the City will obtain an access agreement with the adjacent offsite property owner at 240 N. California Street. Proper notification to SJCEDH and the offsite property owner per the terms of the permit/access agreement will be provided prior to the execution of field work.

4.3 SUBSURFACE UTILITY CLEARANCE

Prior to performing subsurface disturbance for the collection of soil and groundwater samples, Stantec will mark proposed assessment locations with white paint in accordance with Underground Services Alert North (USA) guidelines. Stantec will contact USA North at least 3 days prior to the start of field work to allow USA members to mark subsurface utility locations.

Additionally, Stantec will contract a private utility locator to verify the locations of marked USA member utility lines and investigate the presence of utility lines that are not owned or operated by USA members. The subsurface will be cleared to a depth of 5 feet bgs (at a minimum) with a hand auger to avoid damaging subsurface utility lines that could not be identified using conventional methods.

4.4 SOIL BORING ADVANCEMENT

4.4.1 Hand Auger Soil Borings

To close the Direct Contact and Outdoor Air Exposure data gaps at the site, Stantec proposes to advance four hand auger soil borings (HA-1 through HA-4) at the site (shown on **Figure 2**). The soil borings will be advanced to a depth of 10 feet bgs. The boreholes will be destroyed by backfilling with neat cement grout and capped at the surface with concrete dyed to match the existing grade.

4.4.2 Direct Push Soil Boring

A California C-57 licensed driller will advance the borehole for SB-2 and SB-3 using dual-walled direct push drilling equipment. The boreholes will be advanced at least 5 feet past first water, anticipated to be approximately 25 to 30 feet bgs. After the collection of soil and grab groundwater samples are complete, the boreholes will be properly destroyed by introducing neat cement grout through a tremie pipe and completing at the surface with concrete dyed to match the existing grade.

4.4.3 Groundwater Monitoring Wells

A California C-57 licensed driller will advance the boreholes for MW-1, MW-23, and MW-3 using a hollow stem auger drill rig equipped with 8-inch diameter augers. The boreholes will be advanced to a depth that allows for the monitoring well to be constructed with a screen interval that intersect first water beneath the site, anticipated to be approximately 30 feet bgs. After the collection of soil samples from the borehole, a monitoring well will be installed (discussed below in Section 4.7).

4.5 SOIL SAMPLE COLLECTION AND ANALYSIS

Soil samples from the proposed soil borings will be collected for examination of soil stratigraphy, qualitative analysis for the presence of residual hydrocarbons (i.e. field screened using a photoionization detector [PID]), and laboratory analysis. Soils encountered within the borehole will be described in accordance with the Unified Soil Classification System (USCS) under the direction of a California Professional Geologist. Soil samples from hand auger borings HA-1 through HA-4 will be collected for laboratory analysis at depths of 5 and 10 feet bgs in stainless steel sleeves inserted in the bucket of the hand auger. Soil samples from boring SB-1 will be collected for laboratory analysis at depths with elevated PID readings in acetate sleeves

inserted into the direct-push rods. Soil samples from the soil borings for groundwater monitoring wells MW-1, MW-2, and MW-3 will be collected for laboratory analysis in stainless steel sleeves inserted into a California-modified split spoon sampler.

The soil samples will be placed on ice an, transported to a California Department of Health Services (DHS)-certified lab under chain-of-custody protocol. Soil samples will be analyzed for the presence of TPHd by United States Environmental Protection Agency (US-EPA) Method 8015M, and benzene, toluene, ethylbenzene, and total xylenes (collectively "BTEX"), and naphthalene by US-EPA Method 8260B.

4.6 GRAB GROUNDWATER SAMPLE COLLECTION AND ANALYSIS

Grab groundwater samples will be collected from proposed soil borings SB-1 by lowering a disposable bailer through the annulus of the borehole. The groundwater sample will be transferred from the bailer using a low flow spigot into the appropriate sample container for the requested laboratory analysis. For the analysis of compounds under US-EPA Method 8015 will be placed in 1-liter amber bottles and under US-EPA Method 8260 will be placed in 40-milliliter (ml) volatile organic analyte (VOA) vials preserved with hydrochloric acid (HCl). The samples will be placed on ice, transported to a California DHS-certified laboratory under chain-of-custody protocol, and analyzed for the presence of TPHd by US-EPA Method 8015M, and BTEX and naphthalene by US-EPA Method 8260B. A quality control trip blank (QCTB) VOA will provided by the laboratory to accompany the samples.

4.7 GROUNDWATER MONITORING WELL INSTALLATION AND SAMPLING

4.7.1 Well Installation

Groundwater monitoring wells MW-1, MW-2, and MW-3 will be constructed with 2-inch-diameter Schedule 40 polyvinylchloride (PVC) casing with a 0.010-inch slotted screen interval (this screen interval slot size was selected based on the historical predominance of fine-grained materials in the subsurface). Stantec anticipates that the monitoring wells will be constructed with a 10-foot long screen interval that extends from approximately 20 to 30 feet bgs, extending across the water table. A filter pack of #2/12 sand (or the equivalent) will be emplaced in the well annulus to approximately one foot above the well screen, followed by a two foot bentonite seal. The remainder of the annulus will be sealed to the surface with grout and the wells will be completed with a flush-mounted, traffic rated well box, installed with a concrete surface seal to match the existing grade. Well construction will be adjusted in the field under the direction of a California Professional Geologist or Engineer if encountered subsurface conditions vary from expectations.

4.7.2 Well Development

Following installation, monitoring wells MW-1, MW-2, and MW-3 will be developed using a surge block and bailer to remove fine-grained sediments from the wells and filter pack. If possible, at least ten well casing volumes will be removed from the wells during development until the last three successive measurements for temperature, pH, and electrical conductivity vary by less than 10%, 0.1, and 3%, respectively.

4.7.3 Surveying

Following the installation of wells MW-1, MW-2, and MW-3, a California-licensed land surveyor will survey the wells to the North American Datum (NAD) 83 (1986) for geographical location and the North American Vertical Datum (NAVD) 88 for elevation.

4.7.4 Groundwater Sample Collection and Analysis

A minimum of 48 hours after development, groundwater samples will be collected from the newly installed groundwater monitoring wells. After gauging the wells for depth to water and depth to bottom, they will be purged of three casing volumes. Water quality parameters (temperature, pH, and electrical conductivity) will be collected during purging to ensure that stabilization has been achieved; variation of less than 10%, 0.1, and 3%, respectively. After purging, the groundwater sample will be transferred from the bailer using a low flow spigot into the appropriate sample container for the requested laboratory analysis. For the analysis of compounds under US-EPA Method 8015 will be placed in 1-liter amber bottles and under US-EPA Method 8260 will be placed in 40-ml VOA vials preserved with HCl. The samples will be placed on ice, transported to a California DHS-certified laboratory under chain-of-custody protocol, and analyzed for the presence of TPHd by US-EPA Method 8015M, and BTEX and naphthalene by US-EPA Method 8260B. A QCTB VOA will provided by the laboratory to accompany the samples.

4.8 INVESTIGATION DERIVED WASTE

Investigation derived waste (IDW; e.g. soil cuttings, decontamination rinsate water, and purged groundwater) generated during drilling operations will placed in California Department of Transportation (DOT)-approved 55-gallon steel drums. The drums will be properly labeled and staged on site pending analytical results. A temporary staging area for the IDW will be identified prior to commencing field activities. A composite sample will be collected from the waste and submitted to a California state-certified laboratory for waste characterization purposes. Once IDW analytical data is received, the removal of the IDW will be scheduled once the profile has been received and approved by a licensed disposal facility. Copies of the disposal manifests will be included in the report or submitted under separate cover (if not available at the time of report submittal).

4.9 SENSITIVE RECEPTOR SURVEY

Stantec proposes to perform a sensitive receptor survey 1,500 feet from the boundaries of the site. The following tasks will be performed during the sensitive receptor survey.

4.9.1 Agency Survey

Stantec will submit a Well Drillers Report Inspection Request and Agreement form signed by the CVRWQCB to the Department of Water Resources (DWR) to access well completion records. Once approved, Stantec will review well completion records at the DWR office and identify water wells within 1,500 feet from the boundaries of the plume. Stantec will also contact MUD to identify the potential presence of wells within the proposed search area.

4.9.2 Field Survey

Stantec will perform a field survey within the search boundaries to look for wells and pertinent facilities, and identify land use.

5.0 REPORTING AND SCHEDULING

The activities outlined in this work plan will commence after receiving approval from the CVRWQCB or 60 days after the submission of this document, whichever comes first. Stantec anticipates completing field work activities over the span of a week, after the appropriate drilling permits from SJCEHD and an access agreement with the offsite property owner have been obtained.

A summary report outlining the soil and groundwater sampling, and sensitive receptor survey activities will be submitted to CVRWQCB within four to six weeks following receipt of the final certified laboratory analysis reports for the soil and groundwater samples. The summary report will include a description of field activities; an updated Site location map; a summary of analytical results, data interpretation, and certified laboratory analysis reports and chain-of-custody documents. The soil and groundwater sampling data will be compared to the appropriate SWRCB LTCP criteria and if any values exceed the LTCP criteria, further evaluation may be necessary.

6.0 LIMITATIONS AND CERTIFICATION

This document entitled Revised Data Gap Assessment Work Plan and Path to Closure Review was prepared by Stantec Consulting Services Inc. ("Stantec") for the account of the City of Stockton (the "Client"). Any reliance on this document by any third party is strictly prohibited. The material in it reflects Stantec's professional judgment in light of the scope, schedule and other limitations stated in the document and in the contract between Stantec and the Client. The opinions in the document are based on conditions and information existing at the time the document was published and do not take into account any subsequent changes. In preparing the document, Stantec did not verify information supplied to it by others. Any use which a third party makes of this document is the responsibility of such third party. Such third party agrees that Stantec shall not be responsible for costs or damages of any kind, if any, suffered by it or any other third party as a result of decisions made or actions taken based on this document.

Data Gap Investigation Work Plan and Path to Closure Review, City of Stockton Lot B, 216 North California Street, Stockton, San Joaquin County

Central Valley Regional Water Quality Control Board (Central Valley Water Board) staff reviewed the *Data Gap Assessment Work Plan and Path to Closure* Plan (Work Plan) dated 1 December 2017, received 3 January 2018, submitted by Stantec Consulting Services, Inc. (Stantec) on behalf of the City of Stockton.

In the Work Plan, Stantec proposes to advance three (3) hand auger borings (HA-1 through HA-3) to collect shallow soil data, to advance two (2) direct push soil borings (SB-2 and SB-3) to collect grab groundwater samples for delineation of impacts to groundwater, and to perform a sensitive receptor survey. Stantec proposes collecting shallow soil samples from borings HA-1 through HA-3 at depths of 5 and 10 feet below ground surface (ft bgs). Stantec proposes to analyze soil samples for total petroleum hydrocarbons as diesel (TPH-D) using EPA method 8015M, and for benzene, toluene, ethylbenzene and total xylenes (collectively BTEX), and naphthalene using EPA method 8260B. Stantec proposes to collect soil samples from borings SB-2 and SB-3 at depth with elevated PID readings.

Stantec proposes to advance borings SB-2 and SB-3 to approximately 25 to 30 ft bgs, and to collect a grab groundwater sample at approximately 25 to 30 ft bgs from each boring. Stantec will analyze grab groundwater samples for TPH-D by EPA method 8015M, and for BTEX and naphthalene by EPA method 8260B.

Stantec proposes to perform a sensitive receptor survey to identify water wells within 1,000 feet of the plume boundary.

Central Valley Water Board staff does not concur with the scope of work presented in the Work Plan, and request submission of a Work Plan Addendum by **30 March 2018**. Staff has the following comments:

1. The proposed locations of the shallow soil borings are too far from the former UST to provide useful data. HA-1 is proposed approximately 12 feet east of the former UST, while borings HA-2 and HA-3 are proposed more than 60 feet to the east and south-southeast of

the former UST. Petroleum impacts to shallow soil are unlikely at these distances. The shallow soil borings should be located not more than 15 feet from the former UST and should provide delineation in each direction. Therefore, in the Work Plan Addendum due **30 March 2018**, please include a revised scope of work for shallow soil sampling.

2. The scope of work presented in the Work Plan is not sufficient to define the lateral and vertical extent of impacts to groundwater. In the Work Plan, Stantec stated the following: "A maximum concentration of 560,000 ug/L TPHd was reported from soil borings SB1 in the center of the former UST location. This concentration has been delineated to two orders of magnitude lower at a distance of less than 10 feet (3,600 ug/L, CPT-1) and at a distance of approximately 30 feet (5,800 ug/L, CPT-2) to the east of the former UST pit (cross-gradient direction)." Grab groundwater sample SB1 was not collected at the same depth as the samples from borings CPT-1 and CPT-2. Select grab groundwater data is presented in the table below:

Sample ID	Sample Depth	Sample Date	TPH-D	Benzene	Toluene	Ethylbenzene	Total Xylenes
	(ft bgs)		(ug/L)	(ug/L)	(ug/L)	(ug/L)	(ug/L)
SB1-GW-34	34	2/19/08	**560,000**	<0.5	**4.2**	**1.3**	**79**
CPT-1-61	61	11/12/08	**3,600**	<0.5	<0.5	<0.5	**1.9**
CPT-1-75	75	11/12/08	<50	<0.5	<0.5	<0.5	<1.0
CPT-2-41	41	11/13/08	**5,800**	<0.5	<0.5	**3.3**	**14**

Staff agrees that boring CPT-1 is located approximately 10 feet from boring SB1 and that borings CPT-1 is located approximately 30 feet from boring SB1. However the grab groundwater samples were not collected from the same depths and do not provide lateral delineation of shallow groundwater. Based on the available Site data, petroleum hydrocarbons have migrated vertically to at least 61 ft bgs, and the lateral and vertical extent of petroleum impact to groundwater is unknown. Therefore, please include a scope of work to collect sufficient data to define the lateral and vertical extent of the release in the Work Plan Addendum due **30 March 2018**.

3. In the Work Plan, Stantec references UST sites at 242 Sutter, 437 Miner, and 545 Miner (Chet Auto Repair), and concludes that data from these Sites documents lateral attenuation of dissolved petroleum hydrocarbons in shallow and deeper groundwater zones. Staff does not concur that these Sites define the extent of impact. The 2006-2009 average gradient (flow direction) depicted on Figure 8 in Appendix C of the Work Plan does not appear to correlate to the site specific gradients and average gradients presented on the figure for nearby Sites. Based on a review of groundwater flow directions for these Sites, the groundwater gradient in the area at the Site is anticipated to range from east to northeast. The 242 Sutter and 437 Miner properties are located north-northwest of the Site, and the 545 Miner property is located to the north-northeast of the Site. Based on the anticipated flow direction, these properties and their associated wells are cross-gradient to the anticipated flow direction and migration path of petroleum hydrocarbons from the Site. They are therefore not sufficient to adequately define the nature, extent and mobility of the release.

4. The Work Plan does not include a scope of work for installing groundwater monitoring wells. Groundwater monitoring wells should be installed to allow for repeatable data points and to determine if petroleum hydrocarbons in groundwater are stable to decreasing. Therefore, please include in the Work Plan Addendum a scope of work for installation of at least three (3) groundwater monitoring wells screened across first water, to allow for calculation of groundwater gradient and flow direction. At least one of these wells should be located in close proximity to boring SB1 to monitor concentrations in the source area.

5. The scope of work does not appear to be sufficient to define the lateral and vertical extent of petroleum impacts to soil. The lateral extent of soil impacts to the north, east, south, and west of the UST are unknown. Please include a scope of work in the Work Plan Addendum to address this data gap.

6. In the Work Plan, Stantec stated that soil samples with "Elevated PID readings" would be submitted for laboratory analysis. However, "Elevated PID readings" was not defined. Therefore, in the Work Plan Addendum due **30 March 2018**, please provide a threshold number above which soil samples will be submitted for laboratory analysis, or alternate criteria defining "elevated PID readings".

7. As the extent of petroleum impact to groundwater is unknown, please expand the search radius of the sensitive receptor survey to, at a minimum, 1,500 feet from the former UST. Please also identify all surface water bodies within the search radius.

8. In the Work Plan, Stantec refers to the former UST as both a heating oil tank and a waste oil tank. Staff's understanding is that the former UST was used for storing heating oil. Please assure that the correct fuel type is referenced in future documents. If the tank was used for the storage of waste oil, analysis for additional analytical parameters will be required. If you believe the former UST was used for storage of waste oil or if the historic use is unknown, please include in the Work Plan Addendum this information and a revised parameter list based on the suspected or unknown fuel type.

9. In the Work Plan, Stantec references soil gas sampling performed in July 2017 by Condor Earth Technologies, Inc. (Condor). Staff did not approve a work plan for collection of soil gas samples. A copy of Condor's 12 September 2017 *Soil Gas Sampling Analytical Results Report* (Soil Gas Report) was included as Appendix E of the Work Plan. Benzene was detected in soil gas samples at a maximum concentration of 29 micrograms per cubic meter (ug/m^3), and ethylbenzene and naphthalene were not detected above their reporting limits. Percent oxygen was not analyzed in soil gas samples, and Condor compared sample results to the direct measurement of soil gas without a bio-attenuation zone screening criteria in the State Water Resources Control Board's Low Threat Closure Policy (LTCP) and to California Human Health Screening Levels (CHHSLs). Soil gas samples did not exceed LTCP or CHHSL screening criteria. Based on the results of soil gas sampling, the Site appears to meet LTCP low risk vapor intrusion screening criteria. Additional evaluation for risk to indoor air is not warranted at this time.

If you have any questions, please contact me by phone at (916) 464-4792 or by email at vera.fischer@waterboards.ca.gov.

Field Procedures

Stantec

Utility Locating

Prior to drilling, general arrangement plans are consulted, and boring locations are marked with white paint or other discernible marking and cleared for underground utilities through USA. In addition, a private utility locator is contracted to evaluate whether the proposed boring locations are clear of potential subsurface utilities.

Hand Auger Soil Boring Advancement and Sampling

Hand Auger Borehole Advancement and Soil Sampling

Hand auger drilling is accomplished by manually advancing a stainless steel cutter head (typically three or four inches in diameter) into underlying soils. The soil cuttings are stored in the cutter head while advancing the cutter head. Once the cutter head is full, the auger is retracted and the soil cuttings discharged to a drum. The hand auger assembly consists of five-foot rod extensions that may be connected to achieve the desired sample depth.

Prior to drilling or sampling, and prior to reaching the saturated zone, the cutter head and sampling equipment are cleaned to avoid cross contamination. Equipment decontamination procedures are outlined under Equipment Decontamination, below.

Soil cuttings are used for soil classification and field evaluation of headspace volatile organic vapors, where applicable, using a photo ionization or flame ionization detector calibrated to a calibration gas (typically isobutylene or hexane). VOC vapor concentrations are recorded on the boring logs.

Once the desired sampling depth is achieved by the hand auger, undisturbed samples are collected by driving a clean sampler lined with a brass or stainless steel liner into the underlying undisturbed soils. Cuttings are not used for soil sample collection. The sample is carefully packaged for chemical analysis by capping each end of the sample with a Teflon sheet followed by a tight-fitting plastic cap, and sealing the cap with non-VOC, self-adhering silicon tape.

A label is affixed to the sample indicating the sample identification number, borehole number, sampling depth, sample collection date and time, the sampler's name, and job number. The sample is then annotated on a chain-of-custody form and placed in an ice-filled cooler for transport to the laboratory.

Direct Push (GEOPROBE®) Borehole Advancement and Soil Sampling

Pre-cleaned push rods are advanced using a hydraulic push type rig for the purpose of collecting samples and evaluating subsurface conditions. Larger diameter push rod(s) (typically 4 inches outer diameter) are advanced to the desired depth to seal the upper water-bearing zone. Outer rods are not extended into the saturated zone before collection of groundwater samples. Smaller diameter push rod(s) (typically 2 inches in outer diameter, but large enough to almost completely fill the annulus of the outer push rod(s)) are advanced within the annulus of

the outer push rod to the total depth. The lead inner rod serves as a soil sampler, and an acetate liner is inserted into the annulus of the lead inner rod prior to advancement. Once the soil sample is collected, the inner rod(s) and sampler are retracted and the sample tubes are removed from the sampler head. The sampler head is cleaned, filled with clean sample tubes, and the process of advancing the outer rods prior to the advancement of the sampler rods repeated until the total depth of sampling is reached.

The undisturbed soil samples intended for laboratory analysis are cut away from the acetate sample liner using a hacksaw, or equivalent tool, in sections approximately 6 inches in length. The 6 inch samples are lined at each end with Teflon® sheets and capped with plastic caps. Labels documenting job number, borehole identification, collection date, and depth are affixed to each sample. The samples are then placed into an ice-filled cooler for delivery under chain-of-custody to a laboratory certified by the State of California to perform the specified tests.

Groundwater Sample Acquisition, Handling, and Analysis

Groundwater samples are collected from the borehole using a clean disposable plastic bailer. The groundwater sample is discharged from the bailer through a low-flow control spigot directly into laboratory provided, pre-cleaned, and chemically preserved (where appropriate) sample containers for the analyses requested. Preservatives are used in the samples if appropriate for the analyses, i.e. hydrochloric acid (HCl) for TPPH, BTEX, and fuel oxygenates by EPA Method 8260.

Labels documenting sample number, well identification, collection date and time, type of sample and type of preservative (if applicable) are affixed to each sample. The samples are then placed into an ice-filled cooler for delivery under chain of custody to a certified laboratory. The type of preservative used is documented on the chain of custody form.

To help assure the quality of the collected samples and to evaluate the potential for cross contamination during transport to the laboratory, a distilled-water trip blank accompanies the samples in the cooler. The trip blank is analyzed for the presence of volatile organic compounds of concern. For petroleum hydrocarbons, the trip blank is typically analyzed for TPHg, BTEX, and fuel oxygenates by EPA Method 8260.

Borehole Completion

Upon completion of drilling and sampling, neat cement grout, mixed at a ratio of 6 gallons of potable water per 94 pounds of Portland cement, is introduced, via a tremie pipe. Displaced groundwater is collected at the surface into DOT approved 55-gallon steel drums, or an equivalent storage container. For Direct Push boreholes, the outer drill rods are extracted as the neat cement grout is introduced into the borehole, to prevent separate groundwater bearing zones from communication. In areas where the borehole penetrates asphalt or concrete, the borehole is capped with an equivalent thickness of asphalt or concrete patch to match finished grade.

Hollow Stem Auger (HSA) Drilling/Monitoring Well Installation

Borehole Advancement

Pre-cleaned hollow stem augers (typically 8 to 10 inches in diameter) are advanced using a drill rig for the purpose of collecting samples and evaluating subsurface conditions. Upon completion of drilling and sampling, if no well is to be constructed, the augers are retracted, and the borehole is filled with neat cement grout, mixed at a ratio of 6 gallons of water per 94 pounds of Portland cement, through a tremmie pipe, and pumped to displace standing water in the borehole. In areas where the borehole penetrates asphalt or concrete, the borehole is capped with an equivalent thickness of asphalt or concrete patch to match finish grade.

During the drilling process, a physical description of the encountered soil characteristics (i.e. moisture content, consistency or density, odor, color, and plasticity), drilling difficulty, and soil type as a function of depth are described on boring logs. The soil cuttings are classified in accordance with the USCS.

Split-Spoon Sampling

The precleaned split spoon sampler lined with three 6-inch long brass or stainless steel tubes is driven 18 inches into the underlying soils at the desired sample depth interval. The sampler is driven by repeatedly dropping a 140-pound hammer a free fall distance of 30 inches. The number of blows (blow count) to advance the sampler for each six-inch drive length is recorded on the field logs. Once the sampler is driven the 18-inch drive length or the sampler has met refusal (typically 50 blows per six inches), the sampler is retrieved. Alternatively, with a limited access rig, soil samples are obtained by driving the sample using a pneumatic hammer.

Of the three sample tubes, the bottom sample is generally selected for laboratory analysis. The sample is carefully packaged for chemical analysis by capping each end of the sample with a Teflon sheet followed by a tight-fitting plastic cap, and sealing the cap with non-VOC, self-adhering silicon tape. A label is affixed to the sample indicating the sample identification number, borehole number, sampling depth, sample collection date, and job number. The sample is then annotated on a chain-of-custody form and placed in an ice-filled cooler for transport to the laboratory.

The remaining soil samples are used for soil classification and field evaluation of headspace volatile organic vapors, where applicable, using a photo ionization or flame ionization detector calibrated to a calibration gas (typically isobutylene or hexane). VOC vapor concentrations are recorded on the boring logs.

Groundwater Monitoring Well Installation and Development

Groundwater monitoring wells are constructed by inserting or introduced via a tremmie pipe well materials through the annulus of the hollow stem auger. The groundwater monitoring wells are constructed with a screen interval determined from the encountered soil stratigraphy, to maintain a proper seal at the surface (minimum three feet), and to avoid penetrating aquitards.

Groundwater wells are installed in accordance with the conditions of the well construction permit issued by the regulatory agency exercising jurisdiction over the project site.

The well screen generally consists of schedule 40 polyvinyl chloride (PVC) casing with 0.01 to 0.02 factory slots. As a general rule, 0.01 inch slots are used in fine-grained silts and clays and 0.02 inch slots are used in coarse-grained materials. The screen is then filter packed with #2/12 or #3 sand, or equivalent, for the 0.01 and 0.02 inch slots, respectively.

Once the borehole has been drilled to the desired depth, bentonite (to backfill an aquitard) or six inches of filter sand are introduced via a tremmie pipe to the bottom of the boring and hydrated. The well screen and blank well casing are then inserted through the annulus of the hollow stem augers. The well screen is sand packed by introducing via a tremmie pipe the appropriate filter sand through the annulus between the casing and augers while slowly retracting the augers. During this operation, the depth of the sand pack in the auger is continuously sounded so that the sand remains in the auger annulus during auger retraction to avoid short-circuiting the well. The sand pack is introduced via a tremmie pipe to approximately two feet above the screen, at which time pre-development surging is performed to consolidate the sand pack. Additional sand is added as necessary to help ensure that the sand pack extends a minimum of two feet above top of screen. Following construction of the sand pack, a two foot thick bentonite seal is introduced via a tremmie pipe over the sand and hydrated in place. The remainder of the borehole is backfilled with Portland neat cement grout (or the equivalent), mixed at ratio of 6 gallons of water per 94 pounds of neat cement. The well head is then capped with a locking cap and secured with a lock to protect the well from surface water intrusion and vandalism.

The well head is further protected from damage with traffic a rated well box in paved areas or locking steel riser in undeveloped areas. The protective boxes or risers are set in concrete. The details of well construction are recorded on well construction logs.

Following well construction, the wells are developed in accordance with agency protocols by intermittently surging and bailing the wells. Development is deemed to be sufficient once pH, conductivity and temperature stabilize to within approximately ≤ 0.1, ≤ 3%, and ≤ 10%, respectively, or when ten casing volumes have been removed.

Organic Vapor Procedures

Soil samples are collected for analysis in the field for ionizable organic compounds using a PID with a 10.2 eV lamp. The test procedure involves measuring approximately 30 grams from an undisturbed soil sample, placing this sub-sample in a Ziploc® type bag or in a clean glass jar, and sealing the jar with aluminum foil secured under a ring-type threaded lid. The container is warmed for approximately 20 minutes (in the sun); then the head-space within the container is tested for total organic vapor, measured in parts per million as benzene (ppm; volume/volume). The instrument is calibrated prior to drilling. The results of the field-testing are noted on the boring logs. PID readings are useful for indicating relative levels of contamination, but cannot be used to evaluate petroleum hydrocarbon levels with the confidence of laboratory analyses.

Equipment Decontamination

Equipment that could potentially contact subsurface media and compromise the integrity of the samples is carefully decontaminated prior to drilling and sampling. Drill augers and other large pieces of equipment are decontaminated using high pressure hot water spray. Samplers, groundwater pumps, liners and other equipment are decontaminated in an Alconox scrub solution and double rinsed in clean tap water rinse followed by a final distilled water rinse.

Soil Cuttings and Rinsate/Purge Water

Soil cuttings and rinsate/purge water generated during drilling and sampling are stored on-site in DOT-approved 55-gallon steel drums pending characterization. A label is affixed to the drums indicating the contents of the drum, suspected contaminants, date of generation, and the boring number from which the waste is generated. The drums are removed from the site by a licensed waste disposal contractor to an appropriate facility for treatment/recycling.

Mr. Jordan Peterson
Economic Development Manager
City of Stockton - Economic Development Department
400 East Main Street, 4th Floor
Stockton, CA 95202

RESULTS REPORT REQUEST, CITY OF STOCKTON REDEVELOPMENT AGENCY (T0607755189), 216 NORTH CALIFORNIA STREET, STOCKTON, SAN JOAQUIN COUNTY

Dear Mr. Peterson,

On 8 December 2023, Central Valley Regional Water Quality Control Board (Central Valley Water Board) staff meet with Jordan Peterson and Amanda Thomas of the City of Stockton (City), and the City's environmental consultant, Terracon. The City of Stockton Redevelopment Agency case, also known as City of Stockton Lot B, is located at 216 North California Street in Stockton (Site).

In an email dated 14 December 2023 (December 2023 email), Mr. Joe Rosenbery of Terracon submitted a proposal to deviate from the previously approved scope of work presented in the *Revised Data Gap Assessment Work Plan and Path to Closure Review* (Work Plan) dated 29 March 2018, submitted by Stantec Consulting Services, Inc. (Stantec) on behalf of the City. In the December 2023 email, Terracon proposed the following modifications to the approved scope of work:

- Include methyl tertiary butyl ether (MTBE) in the suite of analysis suite for all samples.
- Submit for laboratory analysis all soil samples with a photo-ionization detector (PID) reading greater than 1.0 parts per million (ppm).
- Collect soil samples every 5 feet from the monitoring well borings. Submit all soil samples collected from boring MW-1 for laboratory analysis. Submit any soil samples with a PID reading greater than 1.0 ppm from borings MW-2 and MW-3.
- Change the drilling method for shallow soil borings from hand auger to direct push.

- Advance shallow soil borings deeper than the proposed 10 feet below ground surface (ft bgs) if field observations indicate petroleum impacts to soil in the 10-foot interval to further define the petroleum release.

Central Valley Water Board staff concurs with the above modifications. Please submit a results report by **15 September 2024**.

In the December 2023 email, Terracon stated that they were discussing the possibility of adding additional scope of work to address concerns regarding the vertical delineation of impacts at the Site. But at the time the email was sent, Terracon and the City had not made a decision to include additional work with this round of the investigation, and Terracon would notify Central Valley Water Board staff as soon as that decision had been made. To date, an additional scope of work for vertical delineation has not been submitted.

Please proceed with implementation of the approved scope of work. Water Board staff will request vertical delineation after completion of this phase of investigation.

If you have any questions or concerns, please contact me at (916) 464-4792 or by email at vera.fischer@waterboards.ca.gov.

Sincerely,

Vera Fischer, P.G.
Engineering Geologist

Galvin Kauffman, P.G. 9542
Senior Engineering Geologist

EXECUTIVE SUMMARY

AdvancedGeo, Inc. (AGI) conducted this Phase I Environmental Site Assessment for the property located at 517 East Channel Street, Stockton, San Joaquin County, California (subject property or property) in conformance with the scope and limitations of ASTM Standard Practice E1527-21 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries 'AAI' (40 CFR Part 312).

PROPERTY USE

The subject property is a single 0.110-acre parcel, located along the north side of East Channel Street, 113 feet east of North California Street, within a commercial area of downtown Stockton, California. The property is developed with a zero-lot-line 12,721-square foot three-story residential apartment building, known as *Julienne Apartments*.

Based on a review of historical documents, the subject property was originally developed as part of the Grand Central Hotel, along with the adjacent properties to the west, before 1895. The area of the hotel that the subject property now occupies was designated as a lawn area with a storage shed and laundry room on the north portion of the subject property. Between 1905 and 1917, the Grand Central Hotel was demolished and the subject property was cleared. In 1917, a portion of a storage building was present on the northeastern corner of the subject property. In addition, according to San Joaquin County Assessors records, the existing three-story apartment building dates back to 1917.

FINDINGS

Based on the standards set by ASTM Standard Practice E1527-21, a recognized environmental condition (REC) is defined as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be *de minimis*, which generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions. Conditions that are considered Business Environmental Risk include the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (ie. activity and use limitations or other property use limitations). A controlled REC (CREC) is a REC that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (activity and use limitations or other property use limitations).

The following findings are differentiated below as Business Environmental Risks, *de minimis* conditions, HRECs, CRECs, RECs and other non-ASTM-defined environmental issues.

BUSINESS ENVIRONMENTAL RISKS

This assessment has revealed no evidence of Business Environmental Risks in connection with the subject property, except for the potential presence of asbestos-containing materials and lead base paint. AGI recommends full asbestos and lead paint surveys be performed by a licensed contractor prior to any remodeling or demolition.

DE MINIMIS CONDITIONS

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITION

This assessment has revealed no evidence of HRECs in connection with the subject property.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITION

This assessment has revealed no evidence of CRECs in connection with the subject property.

RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of RECs in connection with the subject property.

OTHER POTENTIAL ENVIRONMENTAL ISSUES

This assessment has revealed no evidence of other non-ASTM-defined environmental issues in connection with the subject property.

CONCLUSIONS AND OPINION

AdvancedGeo, Inc. (AGI) has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-21 and the US-EPA AAI for the property located at 517 East Channel Street, Stockton, California. It is the opinion of the environmental professionals that the findings and conclusions presented in this report are reasonable and prudent, given the evidence as presented. AGI did not identify any RECs on the subject property during the course of the Phase I. AGI has no other recommendations for additional investigations at the subject property other than those identified above in Business Environmental Risks, at this time.

CRITICAL DATES

The following table lists milestone and critical dates in connection with this assessment.

Report Issuance Date	05 April 2024
Date of Interview of Past and Present Owners and Occupants Identified in Section 10 of ASTM 1527-21	N/A
Date of Recorded Environmental Cleanup Lien Search	N/A
Date of Visual Inspection of Subject and Adjoining Properties	14 March 2024
Earliest Date of Interviews, Lien Search, Record Review and Inspections	03 March 2024
Report Viability Date	04 October 2024
Report Viability Date if updated within 180 days	04 April 2025

The Phase I Environmental Site Assessment report cannot be older than 180 days prior to closing to be valid for a property transfer. In accordance with 40 CFR 312.20 for All Appropriate Inquiries, the following components of the Phase I report must be updated, if more than 180 days has lapsed from the issuance date:

- Interviews with past and present owners, operators, and occupants (40 CFR 312.23)
- Searches for recorded environmental cleanup liens (40 CFR 312.25)
- Reviews of federal, tribal, state, and local government records (40 CFR 312.26)
- Visual inspections of the facility and adjoining properties (40 CFR 312.27)
- The declaration by the Environmental Professional (40 CFR 312.21)

The shelf life of the Phase I Environmental Assessment report, and corresponding update, is one year, or 360 days from the original report issuance date. If more than one year has lapsed from the report date prior to closing, a new Phase I report must be obtained to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability.

1.0. INTRODUCTION

AdvancedGeo, Inc. (AGI) has been retained by Jimenez & Associates Real Estate to perform a Phase I Environmental Site Assessment (Phase I) of the property located at 517 East Channel Street, Stockton, San Joaquin County, California (hereafter referred to as subject property or property). The Phase I was performed in conformance with the scope and limitations of ASTM Standard Practice E1527-21 and the Environmental Protection Agency Standards and Practices for 'All Appropriate Inquiries (AAI)' (40 CFR Part 312). The Phase I is designed to provide the Client (user) with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

1.1. PURPOSE

The purpose of the Phase I is to identify and assess environmental characteristics of the subject property that could lead to liability in the event of ownership, that could have a potential impact on property value or that could impact the present or future use of the subject property.

The purpose of ASTM Standard Practice E1527-21 and USEPA AAI is to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B). An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this practice (based on ASTM Practice E1527-21).

The goal of ASTM Standard Practice E1527-21 is to identify recognized environmental conditions (RECs) in connection with the subject property. A REC is defined as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be *de minimis*, which generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (ie. activity and use limitations or other property use limitations). A controlled REC (CREC) is a REC that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (activity and use limitations or other property use limitations).

1.2. SITE DESCRIPTION

The subject property is a single 0.110-acre parcel, located along the north side of East Channel Street, 113 feet east of North California Street, within a commercial area of downtown Stockton, California. The property is developed with a zero-lot-line 12,721-square foot three-story residential apartment building, known as *Julienne Apartments*. Further property location descriptions, characteristics, improvements and site vicinity characteristics are discussed below.

1.2.1. Location and Legal Description

The subject property location can be identified as the following:

Site Address	517 East Channel Street, Stockton, CA 9520??2525
Assessor's Parcel Number (APN)	139-250-140-000
Property Owner	JIMENEZ GARY P TR ETAL
Land Use Type	Residential Apartments
Zoning	Commercial
Legal Description	N/A
Size of Property	0.11-acres

The parcel map and owner information were obtained from the County Assessor's Office or independent parcel search company. Copies of the parcel map and the owner information are provided in Appendix B.

1.2.2. Site and Vicinity General Characteristics

The subject property is located within a commercial area in the City of Stockton, San Joaquin County, California. Figure 1 shows the setting of the subject property (7.5 Minute United States Geological Survey [USGS] Topographic Series, Stockton West Quadrangle, California). Figure 2 shows the vicinity surrounding the subject property. Photographs of the subject property are provided in Appendix A.

1.2.3. Current Use of Property

The subject property is a 12,721-square foot, three-story apartment building known as *Julienne Apartments*.

1.2.4. Proposed Use of Property

AGI is unaware of any proposed or planned change of property use.

1.2.5. Property Utilities

Current and known historic utilities serving the subject property are summarized in the following table:

Potable Water Source	California Water Company
Sanitary Sewer Utility	City of Stockton
Storm Drain Utility	None observed
Electric Utility	Pacific Gas & Electric
Natural Gas Utility	Pacific Gas & Electric

1.3. DETAILED SCOPE-OF-SERVICES

Except where identified in Section 8.1., the scope of work for the Phase I conforms to ASTM Standard Practice E1527-21 and the USEPA (40 CFR Part 312). Any additional User requested scope of services are discussed in Section 7.0.

1.4. SIGNIFICANT ASSUMPTIONS

Our professional services were performed using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar fields. Findings were based mainly upon examination of historical records, maps, aerial photographs and government agency lists, on a site reconnaissance visit, and on information obtained during personal interviews with persons of long-term familiarity with the subject property as specified in ASTM E1527-21 and the USEPA AAI. Hazardous waste site lists presented in this report represents only a search of specific government records as listed below. AGI is aware additional government records may exist. It should be noted that government agencies often do not list all sites with environmental contamination or that the list could be inaccurate and/or incomplete.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites, are assumed based on geologic interpretations from available sources. AGI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.5. LIMITATIONS AND EXCEPTIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AGI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified as beyond the scope of an ASTM Phase I that may affect business environmental risks at a property include the following: asbestos-containing materials (ACMs); biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint (LBP); lead in drinking water; mold; radon; regulatory compliance; and wetlands. These environmental issues may warrant assessment based on the type of property or transaction, however, they are considered non-scope issues under ASTM Practice E1527-21. Any addition of non-scope items must be agreed upon between the user and AGI prior to initiation of the Phase I.

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit.

1.6. SPECIAL TERMS AND CONDITIONS

There were no special terms or conditions, agreed upon by the environmental professional, beyond the initial agreed upon scope of work, used in preparation of this report.

1.7. USER RELIANCE

Conclusions and recommendations in this report are based on findings regarding historical use of the site, and on features noted during the site reconnaissance. The absence of any potential gross contamination sources, historic or present, does not necessarily imply that the site is free of any contamination. This report only represents a ‘due diligence’ effort as to the current environmental status of the site. No other warranty, expressed or implied, is made as to the professional recommendations contained in this report.

2.0. USER PROVIDED INFORMATION

According to the ASTM Standard E1527-21 and the USEPA AAI, in order to qualify for one of the Landowner Liability Protections (LLPs) to CERCLA liability offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the client (user) must provide to the environmental professional the following information (if available) in relation to the subject property:

Title Records	A review of Title Records was not requested by the user.
Environmental Liens or Activity and Use Limitations	An environmental lien or AUL's (activity and usage limitations) search was not requested by the user.
Specialized Knowledge	AGI was not provided any specialized knowledge by the user and does have not any specialized knowledge of this property outside of what is contained in this report. The property ownership and tenants as well as all individuals who were interviewed as part of this investigation, have not reported any specialized knowledge of this property outside of what is contained in this report.
Commonly Known or Reasonably Ascertainable Information	The user provided no commonly known or reasonably ascertainable information available within the local community about the subject property that is material to recognized environmental conditions in connection with the property.
Valuation Reduction for Environmental Issues	No property valuation reduction related to environmental issues or concerns was reported by the user.

Owner, Property Manager, and Occupant Information	No written or verbal communication with the property owner, manager and/or occupant revealed any information which suggested that there are currently or historically any recognized environmental conditions associated with the subject property not noted in this assessment.
Reason for Performing Phase I	Potential property transaction
Other	No modifications to the ASTM E1527-21 standard scope-of-services were requested by the user for special circumstances that might be encountered at the subject property. Any additional user requested scope of services are discussed in Section 7.0.

Failure to provide the above information could result in a determination that 'all appropriate inquiries' are not complete. Additional items should be collected, if available, and provided to AGI.

3.0. RECORDS REVIEW

The purpose of obtaining and reviewing subject property and site vicinity historical, physical setting and regulatory records is to help identify *recognized environmental conditions* in connection with the subject property.

3.1. HISTORICAL USE INFORMATION

The objective of consulting historical sources for a Phase I is to develop a history of previous uses of the property and surrounding area to help identify the likelihood of past uses having led to recognized environmental conditions with respect to the property. All obvious uses shall be identified from the present to the property's first obvious developed use, or back to 1940, whichever is earlier. Review of standard sources at less than five-year intervals is not required.

3.1.1. Historical Use Information on Subject Property

Subject property history was researched by reviewing historical Sanborn Fire Insurance Maps, aerial photographs, topographic maps, telephone directory information, the City of Stockton Building Department records, and the San Joaquin County Assessor's Office records.

Based on a review of historical documents, the subject property was originally developed as part of the Grand Central Hotel, along with the adjacent properties to the west, before 1895. The area of the hotel that the subject property now occupies was designated as a lawn area with a storage shed and laundry room on the north portion of the subject property. Between 1905 and 1917, the Grand Central Hotel was demolished and the subject property was cleared. In 1917, a portion of a storage building was present on the northeastern corner of the subject property. In addition, according to San Joaquin County Assessors records, the existing three-story apartment building dates back to 1917.

Representative historical records are provided within Appendix B.

3.1.1.1. Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas but are now utilized as a valuable source of historical and environmental risk information. EDR owns the largest collection of Sanborn Fire Insurance Maps. AGI requested EDR to provide any Sanborn Fire Insurance Maps that might cover the subject property. Sanborn maps from the years 1895, 1917, 1950, and 1972 were reviewed. The following is AGI's review of the Sanborn Maps.

Year(s)	Subject Property	Surrounding Area
1895	The subject property is depicted as a landscaped lawn area for the west adjacent three-story Grand Central Hotel. Additionally a storage shed and laundry facilities for the hotel are mapped on the northern portion of the subject property.	North: Miner Channel is mapped directly north adjacent of the subject property followed by primarily low-density residential. South: Channel Street followed by Stockton Business College and Club House. The WP Miller Carriage Factory is mapped to the southwest at the intersection of Channel Street and North California Street. Blacksmith workshops are mapped to the south and southeast approximately 180 feet and 320 feet from the subject property respectively. A brass foundry is mapped to the south approximately 310 feet from the subject property. The area south of the subject property is developed with a mix of residential, commercial businesses, and industrial. East: The area adjacent east of the subject property is occupied by the St. Lawrence Stables followed by North American Street. The area to the east is primarily developed for residential use. A Chinese Laundry facility is mapped to the southeast at the intersection of Channel Street and North American Street approximately 270 feet from the subject property. West: The associated three-story Grand Central Hotel followed by North California Street. The area west of the subject property is mapped primarily for residential.
1917	The Grand Central Hotel has been demolished and the area is mostly an undeveloped field. A portion of a storage warehouse occupies the northeastern corner of the subject property.	North: Primarily unchanged with the exception of a blacksmith and wagon storage facility mapped to the northeast approximately 60 feet from the subject property. South: The area directly south of the subject property beyond East Channel Street has been redeveloped for lodging. The former Stockton Business College has been replaced by an engineering school, including a tire shop with possible automobile oil and grease storage. A coal and wood stockpile is mapped south of the school approximately 120 feet from the subject property. The previously mapped blacksmith shops

Year(s)	Subject Property	Surrounding Area
		located south and southeast have been replaced by a store and hay warehouse. A gasoline service station is mapped on the northwest corner of the intersection of North California Street and East Weber Avenue (242 South Sutter Street), approximately 330 feet from the subject property. East: Unchanged from previous maps with the exception of the removal of the Chinese Laundry facility located along East Channel Street. West: Several business are mapped adjacent and in close proximity to the subject property including a bakery, grocery, salon, a several stores, and a plumbing business. In addition, a vulcanizing tire shop is mapped 50 feet east of the subject property.
1950, 1972	The subject property has been developed with the current three-story 24-unit apartment building. An incinerator is mapped on the north portion of the subject property.	North: The former Miner Channel/Slough adjacent north has been removed or diverted elsewhere. The area directly adjacent north is utilized for automobile parking. The area north of the subject property has transitioned from primarily residential to primarily commercial. A bus depot and auto repair shop is located to the north along East Miner Avenue, approximately 170 feet from the subject property. A gasoline and oil service station is mapped to the northwest approximately 430 feet from the subject property. South: The previously mentioned gasoline service station located at the intersection of North California Street and East Weber Avenue has been replaced by stores. By 1972, the area adjacent south and southeast beyond East Channel Street had been cleared and is now vacant. East: The area adjacent east of the subject property is occupied by a 20 car automobile garage and two stores along East Channel Street. An automobile and radiator shop area mapped to the east approximately 250 feet from the subject property. West: The previously mapped vulcanizing tire shop has been removed and replaced by a store. A gas and oil service station are mapped to the west at the intersection of East Miner Avenue and North California Street, approximately 450 feet from the subject property.

A review of historical Sanborn Fire Insurance Maps did not reveal any items of environmental concern in connection with the subject property, with the exception of:

- Chinese Laundry Facility (270 feet southwest of subject property in 1895) - Unlikely based off distance to subject property.
- Vulcanizing Tire Shop (50 feet southwest of subject property in 1917) - Unlikely based off distance to subject property and nature of facility.
- A gasoline service station is mapped on the northwest corner of the intersection of North California Street and East Weber Avenue (242 South Sutter Street). This entry is further discussed in section 3.3.2.

3.1.1.2. Aerial Photographs

AGI reviewed aerial photographs of the subject property and surrounding area that were provided by EDR, and historical imagery available from Google Earth, for the years 1937, 1940, 1957, 1963, 1968, 1975, 1982, 1984, 1993, 1998, 2006, 2009, 2012, 2016 and 2020. The following is a summary of our review of the aerial photographs:

Year(s)	Subject Property	Surrounding Area
1937, 1940, 1957, 1963, 1968, 1975	The existing apartment building is present on the subject property.	North: Vacant lot utilized for automobile parking and storage followed by the current commercial building. The surrounding area to the north is utilized primarily for commercial use. South: East Channel Street followed by a residential building. By 1957, the former residential building has been removed and is utilized as automobile parking. By 1963, commercial building located southeast of the subject property beyond East Channel Street have been cleared and replaced by a large paved parking lot. East: The current commercial buildings located adjacent east of the subject property are visible on aerial imagery. West: A commercial building is mapped adjacent west of the subject property. A gasoline service station is mapped to the northwest at the intersection of East Miner Avenue and North California Street approximately 450 feet from the subject property.
1982,1984, 1993, 1998	Unchanged from previous aerial imagery.	North: Primarily unchanged from previous aerial imagery. South: By 1998, the building located at the intersection of East Channel Street and North California Street has been removed and replaced by the current paved parking lot. East: Primarily unchanged from previous aerial imagery. West: The former adjacent west building has been removed and remains vacant. The

Year(s)	Subject Property	Surrounding Area
		former gasoline service station located to the northwest has been removed and replaced by automobile parking.
2006, 2009, 2012, 2016, 2020	Unchanged from previous aerial imagery.	North: Primarily unchanged from previous aerial imagery. South: The current building located to the southeast at the intersection of North American Street and East Channel Street is visible at its current location. East: Primarily unchanged from previous aerial imagery. West: Primarily unchanged from previous aerial imagery with the exception of the development of the current San Joaquin Regional Transit District Bus Terminal located approximately 250 feet southwest of the subject property.

A review of historical aerial photographs did not reveal any items of environmental concern in connection with the subject property with the exception of a possible gasoline service station located at the southwestern portion of the intersection of North California Street and East Miner Avenue (434 East Miner Avenue). The gasoline service station is visible on aerial imagery from 1968 to 1982. Te gasoline service station is further discussed in section 3.3.2..

3.1.1.3. Historical Topographic Maps

AGI reviewed historical topographic maps of the subject property and surrounding area that were supplied by EDR for the years 1913, 1952, 1968, 1976, 1987, 2012, 2015, 2018 and 2021. The following is a summary of our review of the topographic maps:

Year(s)	Subject Property	Surrounding Area
1913	A building footprint is mapped on the subject property.	North: Vacant land followed by Miner Channel. The area north of the Miner Channel is developed for primarily residential use. The State Hospital is mapped to the north approximately 3,000 feet from the subject property. South: East Channel Street followed by a building footprint. The area south of the subject property is primarily mapped as medium-density residential and commercial. Mormon Slough is mapped at its current location 3,100 feet south of the subject property. East: Two building footprints followed by North American Street. A large railyard is mapped to the southeast approximately 2,000 feet from the subject property. West: A large building footprint followed by North California Street. Mcleod Lake is

Year(s)	Subject Property	Surrounding Area
		mapped at its current location approximately 1,900 feet from the subject property.
1952, 1968, 1976, 1987	Subject property is mapped as developed land within the City of Stockton.	North: Several churches and Trinity Lutheran School are mapped to the distant north of the subject property. Fremont Square is mapped at its current location northwest of the subject property approximately 950 feet away. South: Independence Square and Washington Square are mapped to the south approximately 1,500 feet and 1,850 feet from the subject property respectively. A post office and courthouse are mapped to the south and southwest approximately 1,100 feet and 1,150 feet from the subject property respectively. East: Several churches and the Schneider Vocational School are mapped to the east. West: City Hall is mapped at its current location 2,000 feet west of the subject property.
2012, 2015, 2018, 2021	No building or land use information is given.	No building or land use information is given. The layout of roads and streets are consistent with what currently exists in the surrounding area.

A review of historical topographic maps did not reveal any items of environmental concern in connection with the subject property.

3.1.1.4. Street Directories

AGI requested that EDR provide a review of city and street directories to determine the occupancy history of the subject property and adjacent properties. EDR provided a review of directories at approximate 5-year intervals between 1925 and 2020. The following is a summary of available listings within the directory search:

Location & Address(es)	Occupant Summary
SUBJECT PROPERTY 517 East Channel Street	1925 - 2020: Julienne Apartments
WEST 214 North California Street	1940 - 1950: Grider Electric Contractor 1955 - 1965: San Joaquin County Heart and Tuberculosis Association 1970: Bobs & Bettys Thrift Shop
WEST 216 North California Street	1930 - 1940: Moore & Sons Pharmaceutical Manufactures 1965: Richard's Studio Portraits & Weddings 1970: Stockton Vacuum Supply

Location & Address(es)	Occupant Summary
NORTH 220 North California Street	1950: Latz Sylvian Auto Parking 1955 - 1965: Moit Auto Park 1970: Toresani Body Works and Kens Parking Lot
WEST 513 East Channel Street	1946 - 1960: Residential Listings
SOUTH 520 East Channel Street	1916 - 1921: Residential Listings 1930 - 1935: Channel Apartments 1946: Girls Co Operative 1950: Hotel Channel 1955: Residential Listings
EAST 523 East Channel Street	1930 - 1935: Stockton Tile Company
EAST 525 East Channel Street	1930: Cecils Garage and Auto Laundry 1935: Segale Auto Repair 1946: A Hart Alf Distilleries 1950 - 1960: Retailers Credit Association of San Joaquin County 2003: Red Men Hall

A review of historical telephone directory listings did not reveal any items of environmental concern.

3.1.1.5. Building Department Records

The City of Stockton Building Department does not have records on file for the subject property.

3.1.1.6. Assessor's Records

A review of San Joaquin County Assessor’s records is summarized in the following table:

Year(s)	Summary
1910	Assessor's estimated date for construction of a 12,721-square foot three-story apartment building with twenty-three studio apartments and a 805-square foot basement.
1983	Installation of electric heaters under permit number 54695.

A review of historical assessor’s records did not reveal any items of environmental concern.

3.1.1.7. Previous Phase I and II Environmental Site Assessments

No previous Phase I or II Environmental Site Assessments were provided to AGI by the user and/or property owner during the course of this Phase I.

3.1.2. Historical Use Information on Adjoining Properties

Historical uses of immediately adjoining properties are summarized below.

North	The former Miner Channel was located immediately north of the subject property from at least 1895 to 1917. By the late-1930s, Miner Channel had been rerouted and the current automobile parking lot is present at its current location.
South	East Channel Street followed by the Stockton Business College as far back as the mid-1890s. By the late-1910s the Stockton Business College building as been repurposed for residential use. By the late-1950s the residential building had been removed and replaced by the current paved parking lot.
East	The St Lawrence Stables were mapped adjacent east of the subject property from the mid-1890s to the late-1910s. By 1930, the current warehouse building has been developed at its current location. Between 1930 and 2003, several entities have occupied the property building, including Cecils Garage and Auto Laundry, Segale Auto Repair, A Hart Alf Distilleries, Retailers Credit Association of San Joaquin County, and Red Men Hall.
West	The three-story Grand Central Hotel is mapped on the west adjacent property in 1895. By 1917, two stores and a bakery are mapped west adjacent of the subject property. By 1982, the property west of the subject property has been cleared of all structures and redeveloped with the current automobile parking lot.

Historical uses of adjoining properties do not appear to be of environmental concern to the subject property with the exception of an possible historical automobile repair shop located on the east adjacent property. This matter is further discussed in section 3.3.2..

3.2. PHYSICAL SETTING

Geology	The subject property is situated within the Great Valley Geomorphic Province of California, a large, elongate, northwest-trending, asymmetric structural trough. The Great Valley Province has been filled with thick sequences of sediment ranging in age from Jurassic to Recent, creating a nearly flat-lying alluvial plain that extends from the Tehachapi Mountains in the south to the Klamath Mountains in the north. Western and eastern boundaries of this province are comprised of the California Coast Range and the Sierra Nevada, respectively. Rocks composing the basement complex of the province have not been completely defined but are believed to be of metamorphic and igneous origins. Northern and southern portions of the Great Valley Province have been designated the Sacramento and San Joaquin Valleys, respectively. The subject property is located within the San Joaquin Valley.
Hydrology	The subject property and vicinity lie within the San Joaquin Valley Groundwater Basin, Eastern San Joaquin Subbasin (5-22.01). The Eastern San Joaquin Subbasin is bounded by the Mokelumne River on the north and northwest; San Joaquin River on the west; Stanislaus River on the south; and consolidated bedrock on the east. The Eastern San Joaquin Subbasin is bounded on the south, southwest, and west by the Modesto, Delta-Mendota, and Tracy Subbasins, respectively and on the northwest and north by the Solano, South American, and Cosumnes Subbasins. The Solano and South American are subbasins of the Sacramento Valley Groundwater Basin. Based on information obtained from the State of California's Geotracker database, an adjacent west LUST clean-up site (216 North California Street), groundwater in the vicinity of the property is found at 20 feet below surface grade (bsg) flowing to the east-northeast.

Topography	The property is located at an elevation of approximately 17 feet above mean sea level (MSL), in an area of low topographic relief. Regional slope of the area is toward the general west.
Surface Soils	EDR provides a report listing dominant soil composition in the general area of the subject property based on information from the United States Department of Agriculture's Soil Conservation Service STATSGO (State Soil Geographic Database) soil maps. Soil surface texture at the subject property consists of soil identified as Yellowlark, a gravelly loam in the Class C Hydrogeologic Group which includes slow infiltration rates. Corrosion potential of this soil for uncoated steel is moderate.
Surface Water Features	There are no surface water features on the subject property. The nearest surface water feature in the vicinity of the subject property is Mcleod Lake, approximately 1,800 feet to the west of the subject property.
Flood Zone	The EDR database report shows that the subject property is not located within either a Special Flood Zone Hazard Area (1%) or a 0.2% Annual Chance Flood Zone. This data, available in select counties across the country, was obtained by EDR from the Federal Emergency Management Agency (FEMA) which has maps depicting FEMA-defined zones.
Wetlands	The EDR database report shows that the subject property is not located within the National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

3.3. STANDARD ENVIRONMENTAL RECORD SOURCES

A computer search of federal, state and regional regulatory agency databases was performed by Environmental Data Resources Inc. (EDR), a data retrieval company, to identify and locate properties in areas of concern that have been reported as sites known or suspected to contain underground storage tanks, or to have been the scene of hazardous materials spills. Additionally, sites permitted to manufacture, utilize, generate, store, treat or dispose of hazardous materials and/or hazardous wastes are identified and located. A list and description of databases investigated, in compliance with ASTM E1527-21 and USEPA AAI, is included in EDR Report provided in Appendix C.

3.3.1. SUBJECT PROPERTY DATABASE SEARCH

The property address 517 East Channel Street, Stockton, California, was not listed on any governmental databases within the EDR Report.

3.3.2. SITE VICINITY DATABASE SEARCH

Sites with recognized environmental conditions surrounding the subject property are typically of concern to the subject property when they are located in an up-gradient direction from the property with respect to the ground water flow direction. Typically, groundwater would represent the migration medium for contaminants over significant distances. Sites located in equi-gradient or down-gradient directions from the subject property are less likely to impact the subject property.

AGI retained EDR to provide current regulatory database information compiled by a variety of federal and state regulatory agencies. A copy of the complete database is included in Appendix C. The following information was obtained:

Regulatory Agency Database	Appropriate Minimum Search Distance (AMSD)	Number of Sites within AMSD
National Priority List	1	0
Proposed National Priority List Sites	1	0
Federal Superfund Liens	1	0

Regulatory Agency Database	Appropriate Minimum Search Distance (AMSD)	Number of Sites within AMSD

EDR Proprietary Manufactured Gas Plants	1	1

AGI's review of the referenced databases also considered the potential or likelihood of contamination from adjoining and nearby sites. To evaluate which of the adjoining and nearby sites identified in the regulatory database report present an environmental risk to the subject property, AGI considered the following:

- The type of database on which the site is identified;
- The topographic position of the identified site relative to the subject property;
- The direction and distance of the identified site from the subject property;
- Local soil conditions in the subject property area;
- The known or inferred groundwater flow direction in the subject property area;
- The status of the respective regulatory agency-required investigation(s) of the identified site (if any); and
- Surface and subsurface obstructions and diversions (e.g., buildings, roads, sewer systems, utility service lines, rivers, lakes and ditches located between the identified site and the subject property.

Only those sites that are judged to present a potential environmental risk to the subject property and/or warrant additional clarification are further evaluated. Using the referenced criteria and based on a review of readily available information contained within the regulatory database report, AGI did not identify adjacent or nearby sites (e.g. within ¼-mile radius) listed on the regulatory database report that were judged to present a potential environmental risk to the subject property with the exception of the following:

Site	Distance & Direction	Database(s) & Summary	Environmental Concern
Toy Jack Indy 511 E Channel St	Adjacent 20 feet Up-gradient	EDR Hist Cleaner: Listed on the EDR Hist Cleaner database as a "LAUNDRIES-CHINESE" for the year 1940. No other information on file.	No indication based on nature of facility and duration of facility operating.

Site	Distance & Direction	Database(s) & Summary	Environmental Concern
A Closton Jack Auto 525 E Channel St	22 feet East Down-gradient	EDR Hist Auto: Historical records from 1940 show that A Closton Jack Auto was engaged in providing both automobile garage services and automobile repair services. No other information on file.	No indication based on duration of facility operating and direction to subject property.
City of Stockton Redevelopment Agency 216 California St	63 feet WSW Up-gradient	UST FINDER RELEASE, UST: The UST record is associated with a vacant lot and has a tank status of inactive and non-billable, with a tank capacity of 500 gallons and containing unspecified petroleum product, possibly heating oil. The program element for this UST is 2380, which is considered obsolete. Specific details such as the chemical form, CAS number, CERS ID, installation date, and closure date are not reported. LUST, NOTIFY 65, CERS: The City of Stockton Redevelopment Agency's Leaking Underground Storage Tank cleanup site is overseen by the Central Valley RWQCB (Region 5S). The case was initiated on December 3, 2004, when an underground storage tank (UST) located in the city's right-of-way was removed. Soil samples revealed petroleum hydrocarbon impact. Subsequent excavations and soil borings conducted in 2005 and 2008 revealed high levels of total petroleum hydrocarbons (TPH) in groundwater and soil samples. The case is marked as open for site assessment, with no reported further action as of the last status update on 22 April 2013. The site's potential media affected includes the aquifer used for drinking water supply and soil, with gasoline identified as a potential contaminant of concern.	Possible - see section 3.4.2..
Smith T L Auto Repair 539 E Channel St	93 feet E Down-gradient	EDR Hist Auto: Listed on the EDR Hist Auto database as an automotive repair facility in the year 1940. No other information on file.	No indication based on duration of facility operating and direction to subject property.
Stentz Thos J Laundry 236 N California St	110 feet NW Equi-gradient	EDR Hist Cleaner: Listed as a "laundries" facility for the year 1906. No other information on file.	No indication based on nature of facility and duration of facility operating.
Hiydramatic Specialty Auto Repair 221 N American St	111 feet NE Down-gradient	EDR Hist Auto: Listed on the EDR Hist Auto database as an "automobile repair" and "general automotive repair shop" for the years 1970 and 1991 - 1996. No other information on file.	No indication based on direction to subject property.
Grand Auto #34 240 N California St	124 feet NW Equi-gradient	UST: The UST record for 240 North California Street falls under the San Joaquin region with Facility ID FA0005125. The tank, with Tank	No indication based on distance to subject property.

Site	Distance & Direction	Database(s) & Summary	Environmental Concern
		Number 1, is currently inactive and non-billable, holding a capacity of 5,000 gallons of unspecified petroleum product. It is categorized under Program Element 2380, indicating additional existing USTs, though this element is considered obsolete.	
Sutter Office Center 242 Sutter St and 434 E Miner Ave	284 feet WNW Equi-gradient	LUST, CORTESE, HIST CORTESE, NOTIFY 65, CERS: The Sutter Office Center was a LUST Cleanup Site overseen by the Central Valley RWQCB (Region 5S). The case was completed and closed on 24 February 2016, with a RB Case Number of 390910. The potential contaminant of concern was gasoline, affecting the aquifer used for drinking water supply. The leak was reported on 25 January 1996, with the stop method involving closing and removing the tank. The site history reveals that it was a former Chevron facility, with multiple tanks documented but no records of tank removals. Groundwater monitoring and site investigation activities were conducted, and Chevron took over the site investigation in 2006 as a responsible party.	No indication based on regulatory status and distance to subject property.

3.4. ADDITIONAL ENVIRONMENTAL AGENCY RECORD SOURCES

In addition to the EDR computer search of federal, state and regional regulatory agency databases, AGI contacted appropriate regulatory agencies to review records regarding the property and surrounding sites identified as having recognized environmental conditions that have the potential to impact the subject property based on ground water flow direction, distance from the subject property and nature of the releases causing the environmental condition.

Additional agency searches include the following:

- San Joaquin County Environmental Health Department (SJCEHD) and the Central Valley Regional Water Quality Control Board (Regional Board) maintain records of industrial violations for this area and are the lead agencies for the enforcement of the State Underground Storage Tank and Hazardous Waste Laws for San Joaquin County. AGI requested to review any files that were available.

- The Regional Board also maintains and online computer database, GeoTracker, that provides listings of closed and active sites related to unauthorized releases of hydrocarbons as well as solvents, metals, and other materials. For listed sites, online reports are commonly available. AGI reviewed the GeoTracker database for information that may be available for the subject property or surrounding sites.

- The California Department of Toxic Substances Control (DTSC) is the State of California agency responsible for oversight of hazardous waste regulations, cleanup of existing contamination, pollution prevention and reduction in hazardous waste and toxic materials and identification of potential new pollutants. The DTSC maintains the EnviroStor Data Management System (ENVIROSTOR)

- The San Joaquin Valley Air Pollution Control District (SJVAPCD) develops and implements high-quality, effective local programs to fulfill air quality regulatory requirements and address community concerns. The SJVAPCD issues stationary source air permits, regulates sources of air pollutants to minimize adverse impacts on the community and environment, maintain and operate the ambient monitoring network, and inform the public about current air conditions. AGI submitted a public records request to the SJVAPCD to review records for the subject property.

- The Geologic Energy Management Division's (CalGEM) online mapping application presents California's oil and gas industry information from the geographic perspective. AGI reviewed the CalGEM Well Finder database for information that may be available for the subject property or surrounding sites.

3.4.1. Additional Subject Property Record Sources

The subject property address was searched on the following record sources:

SOURCE	SUMMARY
Regional Board & GeoTracker database	The subject property is not listed on the GeoTracker database, and the Regional Board does not have any records on-file.
DTSC & ENVIROSTOR database	The subject property is not listed on the ENVIROSTOR database and the DTSC does not have any records on-file.
USEPA ENVIROFACTS	The subject property is not listed on the ENVIROFACTs database.
SJCEHD	The SJCEHD does not have any records on-file for the subject property.
SJVAPCD	The SJVAPCD does not have any records on-file for the subject property.
CalGEM Finder	According to the CalGEM Finder, no oil and/or gas wells are located in the vicinity of the subject property.

3.4.2. Additional Site Vicinity Record Sources

The SJCEHD and Regional Board maintain records for, and are responsible for, enforcement of state UST and hazardous waste laws. AGI commonly reviews files for up-gradient sites under active environmental regulation to ascertain the current site status and its potential to impact the subject property. No sites, under active or past environmental regulation, were identified by the database search within the required search radius of potential concern to the property, with the exception of the following:

<u>CITY OF STOCKTON REDEVELOPMENT AGENCY (216 North California Street)</u>

The Central Valley RWQCB (Region 5S) oversees the City of Stockton Redevelopment Agency's Leaking Underground Storage Tank (LUST) cleanup site at 216 North California Street. The case began on 3 December 2004, when a 1,500-gallon capacity underground storage tank (UST) containing heating oil was removed due to corrosion signs and observed soil staining indicating petroleum leakage. Subsequent soil samples confirmed petroleum hydrocarbon presence. In February 2008, sampling confirmed hydrocarbon contamination, with elevated levels of total petroleum hydrocarbons (TPH), specifically TPH as diesel (TPH-d), in soil and groundwater samples. Further investigations in November 2008 using Cone Penetration Test (CPT) borings identified significant TPH-d concentrations, highlighting persistent environmental impacts. In 2017, three soil-vapor samples showed minor contamination near the former UST but no detection of contaminants reaching the subject property, indicating no contamination through the soil-vapor pathway to the property.

3.5. PROVIDED SUBJECT PROPERTY RECORDS

No records were provided to AGI by the user and/or property owner during the course of this Phase I.

3.6. VOLATILE ORGANIC COMPOUND VAPOR ENCROACHMENT

The encroachment of hydrocarbon and volatile organic compound (VOC) vapors into soil pore space occurs when organic chemicals migrate from contaminated groundwater or soil into the airspace between soil particles. Some typical organics involved are petroleum based or chlorinated solvents (e.g, BTEX and dry-cleaning chemicals). They may have leaked into the groundwater and/or soil from underground storage tanks, or buried waste, or from disposal in septic systems. ASTM Standard E2600-22 (Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions) defines the term "Vapor Encroachment Condition (VEC)" as the presence or likely presence of "chemical of concern" vapors in the subsurface of the Target Property caused by the release of vapors from contaminated soil or groundwater or both either on or near the Target Property as identified by the Tier 1or Tier 2 procedures.

In compliance with ASTM Standard E2600-22, AGI evaluated the potential for a VEC at the subject property. Based on a VEC screening, it was determined that ‘a VEC does not exist’ at the property. A copy of the AGI-generated Tier 1 VEC screening form is provided within Appendix E.

4.0. SITE RECONNAISSANCE

A subject property site reconnaissance was conducted by an AGI representative on 14 March 2024. At the time of the site visit the weather was clear and cool. Primary features of the property are shown in a site plan provided. Photographs of selected features of the subject site are included in Appendix A.

4.1. METHODOLOGY AND LIMITING CONDITIONS

During the site reconnaissance, AGI had full access to the exterior of the property and access to the interior of the storage closet, laundry room, basement area and three apartment units (Unit numbers 101, 300 and 304). No other limiting conditions were noted.

4.2. GENERAL SITE SETTING

The following is a description of the property improvements:

Structures	The subject property is a 12,721-square foot three-story apartment building, constructed on a concrete slab-on-grade foundation and brick walls. Wood-framed windows with damaged paint were observed on the exterior. According to Mr. Tony Amezcua, management staff for the subject property, the glass has been changed out in several of the windows, but the windows have otherwise remained untouched during his time with the property. The interior includes a total of twenty-five studio apartments, a storage room, a small laundry room and several storage closets. An approximately 805-square foot basement area is located under the northwest portion of the building. A small workshop area was observed in the basement area. According to Mr. Amezcua, the former property owner had the workshop set up for making cabinets.

Structures	The interiors of the inspected units were generally consistent, with hardwood flooring, plaster walls and plaster ceilings.
Adjoining / Access / Egress Roads	Access to the property is gained through a primary entrance along the north side of East Channel Street. A rear entrance is also located on the north side of the building.
Surface Types	The property is covered by building.
Additional Features	None observed
Surface Water	None observed

At the time of the site reconnaissance, current uses of adjacent properties included the following:

North	Parking lot
South	Parking lot
East	525 East Channel Street
West	East Channel Street followed by BAC Community Bank (517 East Weber Avenue)

Current uses of the adjoining properties do not appear to be of potential environmental concern to the subject property.

4.3. EXTERIOR AND INTERIOR OBSERVATIONS

The following was observed at the time of the property reconnaissance:

OBSERVED	CONDITION OBSERVED ON/AT SUBJECT PROPERTY
No	Pits, ponds or lagoons with respect to waste treatment or disposal
No	Stained soil or pavement, patched pavement
No	Stressed vegetation (from causes other than insufficient water)
No	Fill dirt from unknown source, or contaminated source
No	Solid waste (mounds or depressions suggesting waste disposal)
No	Waste water / storm water discharged into a drain, ditch or stream
No	Wells (abandoned, irrigation, domestic, monitoring or oil and gas)
No	Dry wells
No	Septic systems or cesspools
No	Movement of hazardous materials to adjacent properties
No	Hazardous substances and/or petroleum products
No	Above-ground storage tanks (ASTs) for storage of petroleum products and/or hazardous substances
No	Underground storage tanks (USTs) for storage of petroleum products and/or hazardous substances
No	Strong, pungent or noxious odors
No	Pools of liquid (other than water)
No	55-gallon drum or large sack storage
No	Unidentified substance containers
No	Stains and/or corrosion on floors, walls or ceiling (except water)
No	Drains and sumps
No	Oil-water separator/clarifier
No	Electrical or hydraulic equipment known to contain PCBs
No	Obvious signs of possible ACMs
No	Obvious signs of mold
No	Other areas of environmental concern

5.0. MATERIAL STORAGE

No current or historic containers, storage vessels, and containment systems (e.g., clarifiers, oil/water separators, vaults, frac ponds, tanks, drums, storage lockers, silos) of 55 gallons or more for individual containers, or 100 gallons in aggregate for smaller containers, were observed on the subject property or have been historically utilized on the property.

6.0. INTERVIEWS

Interviews performed during the course of this Phase I are described below.

Interviewee	Interview Summary
Property Owner	Stacy Jimenez, the current property owner, has completed an ASTM-compliant questionnaire. The information gathered from the ASTM questionnaire is listed below: • The subject property was purchased by Mrs. Jimenez in September 2019. The subject property was purchased from Espona Holdings LLC, who acquired it in 2014. • The subject property has been utilized as a multi-family residential building as far as Mrs. Jimenez is aware. • It is unknown if asbestos or lead based paint surveys have been performed on the subject property structure. • The subject property and adjoining properties have not been used for research, military, and/or industrial uses. • No dry wells, sumps, separators (or clarifiers or grease traps) or in-ground hydraulic lifts have ever been on the property. • There is no evidence that fill dirt has been brought onto the property that originated from a contaminated site or from an unknown origin on the property. • No hazardous substances, petroleum products, or environmental violations have occurred or have been present, with respect to the property. • No environmental liens or governmental notification relating to past or recurrent violations of environmental laws with respect to the property.
Site Manager	The property site manager was not interviewed during the course of this Phase I.
Property Occupant(s)	Property occupants were not interviewed during the course of this Phase I.
Local Government Officials	With the exception of file review requests, no local government officials were interviewed during the course of this Phase I.
Others	No additional interviews were performed during the course of this Phase I.

ASTM-compliant interview/questionnaire documentation is provided as Appendix D.

7.0. BUSINESS ENVIRONMENTAL RISKS - NON-ASTM SERVICES

Additional environmental considerations beyond the scope of the standard ASTM practice that have the potential to pose business environmental risks are discussed below.

7.1. MOLD

Molds are part of the natural environment. Outdoors, molds play a part in nature by breaking down dead organic matter such as fallen leaves and dead trees, but indoors, mold growth should be avoided. Molds reproduce by means of tiny spores; the spores are invisible to the naked eye and float through outdoor and indoor air. Mold may begin growing indoors when mold spores land on surfaces that are wet. There are many types of mold, and none of them will grow without water or moisture.

Molds are usually not a problem indoors, unless mold spores land on a wet or damp spot and begin growing. Molds have the potential to cause health problems. Molds produce allergens (substances that can cause allergic reactions), irritants, and in some cases, potentially toxic substances (mycotoxins).

At the time of the property reconnaissance, no obvious signs of mold/microbiological growth, were observed.

7.2. ASBESTOS CONTAINING BUILDING MATERIALS

Asbestos is a mineral fiber that has been used commonly in a variety of building construction materials for insulation and as a fire-retardant. Because of its fiber strength and heat resistant properties, asbestos has been used for a wide range of manufactured goods, mostly in building materials (roofing shingles, ceiling and floor tiles, paper products, and asbestos cement products), friction products (automobile clutch, brake, and transmission parts), heat-resistant fabrics, packaging, gaskets, and coatings.

Prior to the late 1970s, building products and insulation materials commonly contained asbestos. In 1973 and 1978, the EPA and the Consumer Product Safety Commission banned various applications of asbestos; however, products containing asbestos may still have been used until 1980, due to oversupply that had been purchased prior to the ban. In accordance California bill AB3713, requires buildings constructed before 1980 to be surveyed for asbestos. When asbestos-containing materials are damaged or disturbed by repair, remodeling or demolition activities, microscopic fibers become airborne and can be inhaled into the lungs, where they can cause significant health problems.

The existing subject property structure was constructed in 1917, making the presence of ACMs possible. Prior to any demolition or remodeling of the buildings, AGI recommends conducting a full asbestos survey by a licensed contractor.

7.3. LEAD-BASED PAINT

Lead is a toxic metal that was used for many years in products found in and around our homes. Lead-based paint (LBP) was used extensively in buildings constructed before 1950. In 1978, LBP was banned by the federal government. Lead may cause a range of health defects, from behavioral problems and learning disabilities, to seizures and death.

The existing subject property structure was constructed in 1917, making the presence of LBP-coated materials possible. Prior to any demolition or remodeling of the buildings, AGI recommends conducting a full lead paint survey by a licensed contractor.

7.4. RADON

Radon is a naturally occurring, colorless, odorless gas that is soluble in water. It is produced through the radioactive decay of uranium and radium, which is naturally present in soil and in minerals in bedrock. Radon is radioactive, which means that it breaks down or decays to form other elements. Radon concentrations generally differ among different rock types and can vary considerably within the same geologic formation. Radon moves from its source in rocks and soils through voids and fractures. It can enter buildings as a gas through foundation cracks or it can dissolve in ground water and be carried to buildings through the use of water-supply wells. Buildings with basements and concrete slab foundations are more susceptible to elevated levels of indoor radon gas. The inhalation of radon gas can cause damage to lung tissue.

A common unit of radioactivity measurement is picocuries per liter (pCi/L). The USEPA established the recommended safe radon level at 4 pCi/L. According to the USEPA, San Joaquin County is in a low radon potential area (Zone 3), defined as having a ‘predicted average indoor radon screening level of less than 2 pCi/L'.

7.5. WETLANDS

As reported in Section 3.2., according to the EDR Report (Appendix C) the subject property is not located within a National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

7.6. REGULATORY COMPLIANCE

AGI searched the subject property address, 517 East Channel Street, Stockton, California, on local, state and federal databases. No records were found regarding any outstanding regulatory permitting or requirements/directives in connection with the property.

7.7 OTHER BUSINESS ENVIRONMENTAL RISK

No other business environmental risks were identified in connection with the subject property.

8.0. EVALUATION

Any deviations from the ASTM Standard Practice 1527E-21 and USEPA AAI are presented below, along with the findings, conclusions, and opinions identified during the course of this Phase I.

8.1. DATA GAPS AND LIMITATIONS

A data gap occurs when a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance, and interviews. The largest data gap in research was 18 years, between 1895 and 1913, with the earliest researched information being a Sanborn Fire Insurance Map dated in 1895. Data gaps generally do not exceed five years between 1940 through the present. AGI does not

believe any gaps in the data reviewed have affected the ability to identify potential environmental issues.

8.2. FINDINGS

Based on the standards set by ASTM Practice E1527-21, the following findings are differentiated below as Business Environmental Risk (including the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials may constitute a Business Environmental Risk), *de minimis* conditions unlikely to be subject to government enforcement, HRECs, CRECs and RECs, as defined in Section 1.1. of this report.

8.2.1. Business Environmental Risk

This assessment has revealed no evidence of potential Business Environmental Risks in connection with the subject property, except for the potential presence of asbestos containing materials and lead-based paint based on the age of the building. Prior to any demolition or remodeling, AGI recommends full ACM and LBP surveys be conducted by an appropriately licensed contractor.

8.2.2. De Minimis Conditions

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

8.2.3. Historical Recognized Environmental Conditions

This assessment has revealed no evidence of HRECs in connection with the subject property.

8.2.4. Controlled Recognized Environmental Conditions

This assessment has revealed no evidence of CRECs in connection with the subject property.

8.2.5. Recognized Environmental Conditions

This assessment has revealed no evidence of RECs in connection with the subject property.

8.2.6 Other Potential Environmental Issues

This assessment has revealed no evidence of other non-ASTM-defined environmental issues in connection with the subject property.

9.0 CONCLUSIONS AND OPINION

AGI has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-21 and the US-EPA AAI for the property located at 517 East Channel Street, Stockton, California. Any exceptions to, or deletions from, this practice or scope of work are described in Section 8.1. of this report or presented as non-ASTM services in Section 7.0. It is the opinion of the environmental professionals that the findings and conclusions presented in this report are reasonable and prudent, given the evidence as presented. This assessment has revealed no evidence of RECs in connection with the property. AGI has no recommendations for additional environmental investigations of the subject property.

10.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR § 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Robert Loeffler
Senior Geologist / Vice President

11.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Qualifications of the environmental professionals involved in the preparation of this Phase I are included in Appendix F.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AdvancedGeo, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1906 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
